CompTIA Security+ Certification Exam

Version 12.1

QUESTION 1

DRAG DROP

A security administrator wants to implement strong security on the company smart phones and terminal servers located in the data center. Drag and drop the applicable controls to each asset types.

Instructions: Controls can be used multiple times and not all placeholders need to be filled. When you have completed the simulation, please select the Done button to submit.

Select and Place:

| Controls | Company Managed Smart Phone | Data Center Terminal Server |
|---------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Screen Lock |  |  |
| Strong Password | | |
| Device Encryption | | |
| Remote Wipe | | |
| GPS Tracking | | |
| Pop-up blocker | | |
| Cable Locks | | |
| Antivirus | | |
| Host Based Firewall | | |
| Proximity Reader | | |
| Sniffer | | |
| Mantrap | | |
| | | Reset All |

Correct Answer:

| Controls | Company Managed Smart Phone | Data Center Terminal Server |
|---------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Screen Lock |  |  |
| Strong Password | Screen Lock | Cable Locks |
| Device Encryption | Strong Password | Antivirus |
| Remote Wipe | Device Encryption | Host Based Firewall |
| GPS Tracking | Remote Wipe | Proximity Reader |
| Pop-up blocker | GPS Tracking | Sniffer |
| Cable Locks | Pop-up blocker | Mantrap |
| Antivirus | | |
| Host Based Firewall | | |
| Proximity Reader | | |
| Sniffer | | |
| Mantrap | | |

Reset All

Section: (none)

Explanation

Explanation/Reference:

Explanation:

1: Spear phishing is an e-mail spoofing fraud attempt that targets a specific organization, seeking unauthorized access to confidential data. As with the e-mail messages used in regular phishing expeditions, spear phishing messages appear to come from a trusted source. Phishing messages usually appear to come from a large and well-known company or Web site with a broad membership base, such as eBay or PayPal. In the case of spear phishing, however, the apparent source of the e-mail is likely to be an individual within the recipient's own company and generally someone in a position of authority.

2: The Hoax in this question is designed to make people believe that the fake AV (anti- virus) software is genuine.

3: Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit.

4: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft. Phishing email will direct the user to visit a website where they are asked to update personal information, such as a password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page.

5: Similar in nature to e-mail phishing, pharming seeks to obtain personal or private (usually financial related) information through domain spoofing. Rather than being spammed with malicious and mischievous e-mail requests for you to visit spoof Web sites which appear legitimate, pharming 'poisons' a DNS server by infusing false information into the DNS server, resulting in a user's request being redirected elsewhere. Your browser, however will show you are at the correct Web site, which makes pharming a bit more serious and more difficult to detect. Phishing attempts to scam people one at a time with an e-mail while pharming allows the scammers to target large groups of people at one time through domain spoofing.

QUESTION 3

DRAG DROP

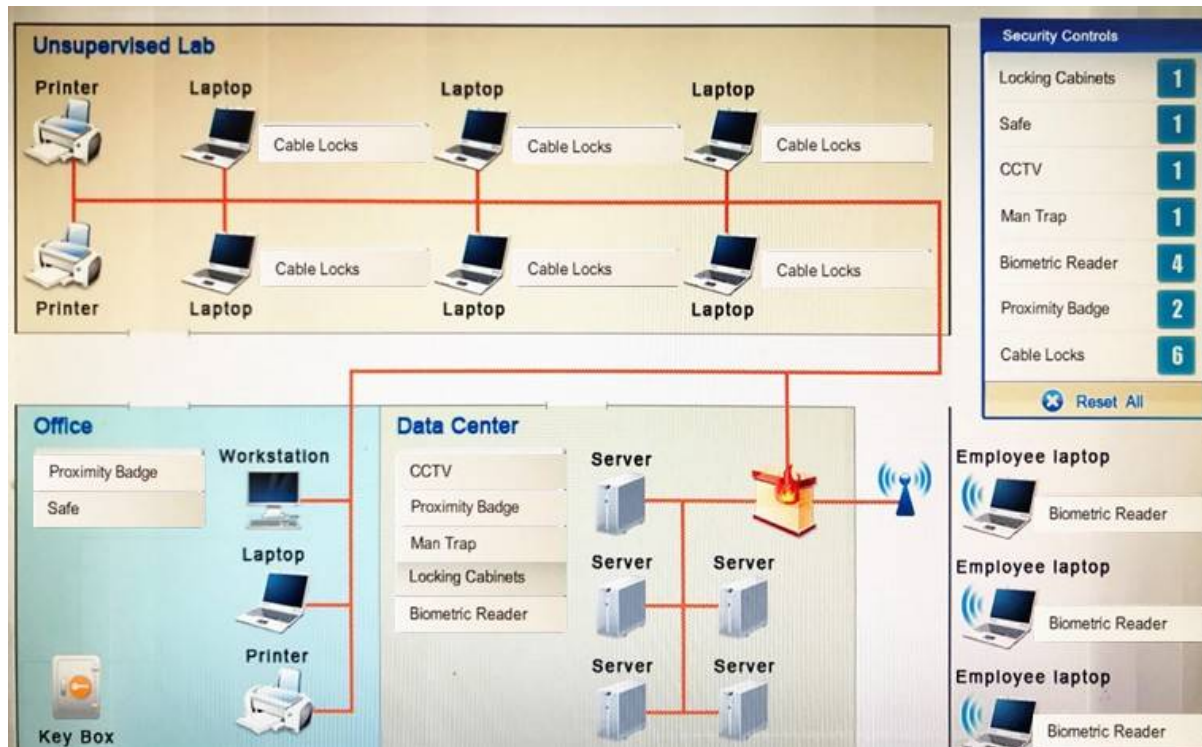

You have been tasked with designing a security plan for your company. Drag and drop the appropriate security controls on the floor plan.

Instructions: All objects must be used and all place holders must be filled. Order does not matter. When you have completed the simulation, please select the Done button to submit.

Select and Place:

Correct Answer:

Section: (none)
Explanation

Explanation/Reference:

Explanation:

Cable locks - Adding a cable lock between a laptop and a desk prevents someone from picking it up and walking away

Proximity badge + reader

Safe is a hardware/physical security measure

Mantrap can be used to control access to sensitive areas.

CCTV can be used as video surveillance.

Biometric reader can be used to control and prevent unauthorized access.

Locking cabinets can be used to protect backup media, documentation and other physical artefacts.

QUESTION 4

Which of the following would a security specialist be able to determine upon examination of a server's certificate?

- A. CA public key
- B. Server private key
- C. CSR
- D. OID

Correct Answer: D

Section: (none)
Explanation

Explanation/Reference:

QUESTION 5

A security analyst is diagnosing an incident in which a system was compromised from an external IP address.

The socket identified on the firewall was traced to 207.46.130.0:6666. Which of the following should the security analyst do to determine if the compromised system still has an active connection?

- A. tracert
- B. netstat
- C. ping
- D. nslookup

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 6

Multiple organizations operating in the same vertical want to provide seamless wireless access for their employees as they visit the other organizations. Which of the following should be implemented if all the organizations use the native 802.1x client on their mobile devices?

- A. Shibboleth
- B. RADIUS federation
- C. SAML
- D. OAuth
- E. OpenID connect

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation: <http://archive.oreilly.com/pub/a/wireless/2005/01/01/authentication.html>

QUESTION 7

Which of the following BEST describes an important security advantage yielded by implementing vendor diversity?

- A. Sustainability
- B. Homogeneity
- C. Resiliency
- D. Configurability

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 8

In a corporation where compute utilization spikes several times a year, the Chief Information Officer (CIO) has requested a cost-effective architecture to handle the variable capacity demand. Which of the following characteristics BEST describes what the CIO has requested?

- A. Elasticity
- B. Scalability
- C. High availability
- D. Redundancy

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Elasticity is defined as “the degree to which a system is able to adapt to workload changes by provisioning and de-provisioning resources in an autonomic manner, such that at each point in time the available resources match the current demand as closely as possible”.

QUESTION 9

A security engineer is configuring a system that requires the X.509 certificate information to be pasted into a form field in Base64 encoded format to import it into the system. Which of the following certificate formats should the engineer use to obtain the information in the required format?

- A. PFX
- B. PEM
- C. DER
- D. CER

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 10

Which of the following attacks specifically impact data availability?

- A. DDoS
- B. Trojan
- C. MITM
- D. Rootkit

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Reference: <https://www.netscout.com/what-is-ddos>

QUESTION 11

A security analyst is hardening a server with the directory services role installed. The analyst must ensure LDAP traffic cannot be monitored or sniffed and maintains compatibility with LDAP clients. Which of the following should the analyst implement to meet these requirements? (Select two.)

- A. Generate an X.509-compliant certificate that is signed by a trusted CA.
- B. Install and configure an SSH tunnel on the LDAP server.

- C. Ensure port 389 is open between the clients and the servers using the communication.
- D. Ensure port 636 is open between the clients and the servers using the communication.
- E. Remote the LDAP directory service role from the server.

Correct Answer: AD

Explanation

Explanation/Reference:

QUESTION 13

A penetration tester is crawling a target website that is available to the public. Which of the following represents the actions the penetration tester is performing?

- A. URL hijacking
- B. Reconnaissance
- C. White box testing
- D. Escalation of privilege

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 14

Which of the following characteristics differentiate a rainbow table attack from a brute force attack? (Select two.)

- A. Rainbow table attacks greatly reduce compute cycles at attack time.
- B. Rainbow tables must include precomputed hashes.
- C. Rainbow table attacks do not require access to hashed passwords.
- D. Rainbow table attacks must be performed on the network.
- E. Rainbow table attacks bypass maximum failed login restrictions.

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 15

Which of the following best describes routine in which semicolons, dashes, quotes, and commas are removed from a string?

- A. Error handling to protect against program exploitation
- B. Exception handling to protect against XSRF attacks.
- C. Input validation to protect against SQL injection.
- D. Padding to protect against string buffer overflows.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 16

A security analyst wishes to increase the security of an FTP server. Currently, all traffic to the FTP server is unencrypted. Users connecting to the FTP server use a variety of modern FTP client software.

The security analyst wants to keep the same port and protocol, while also still allowing unencrypted connections. Which of the following would BEST accomplish these goals?

- A. Require the SFTP protocol to connect to the file server.
- B. Use implicit TLS on the FTP server.
- C. Use explicit FTPS for connections.
- D. Use SSH tunneling to encrypt the FTP traffic.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 17

Which of the following explains why vendors publish MD5 values when they provide software patches for their customers to download over the Internet?

- A. The recipient can verify integrity of the software patch.
- B. The recipient can verify the authenticity of the site used to download the patch.
- C. The recipient can request future updates to the software using the published MD5 value.
- D. The recipient can successfully activate the new software patch.

Correct Answer: A

Section: (none)

QUESTION 18

Refer to the following code:

```
public class rainbow {  
    public static void main (String [] args) {  
        object blue = null;  
        blue.hashCode (); }  
}
```

Which of the following vulnerabilities would occur if this is executed?

- A. Page exception
- B. Pointer deference
- C. NullPointerException
- D. Missing null check

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 19

Multiple employees receive an email with a malicious attachment that begins to encrypt their hard drives and mapped shares on their devices when it is opened. The network and security teams perform the following actions:

Shut down all network shares.

Run an email search identifying all employees who received the malicious message.

Reimage all devices belonging to users who opened the attachment.

Next, the teams want to re-enable the network shares. Which of the following BEST describes this phase of the incident response process?

- A. Eradication
- B. Containment
- C. Recovery
- D. Lessons learned

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 20

An organization has determined it can tolerate a maximum of three hours of downtime. Which of the following has been specified?

- A. RTO

- B. RPO
- C. MTBF
- D. MTTR

Correct Answer: A

QUESTION 22

A security analyst is reviewing the following output from an IPS:

```
[**] [1:2467:7] EXPLOIT IGMP IGAP message overflow attempt [**]  
[Classification: Attempted Administrator Privilege Gain] [Priority: 1]  
07/30-19:45:02.238185 250.19.18.71 -> 250.19.18.22  
IGMP TTL:255 TOS: 0x0 ID: 9742 IpLen:20 DgmLen: 502 MF  
Frag offset: 0x1FFF Frag Size: 0x01E2  
[Xref => http://cve.mitre.org/cgi-bin/cvename.cgi?name=2004-0367]
```

Given this output, which of the following can be concluded? (Select two.)

- A. The source IP of the attack is coming from 250.19.18.22.
- B. The source IP of the attack is coming from 250.19.18.71.
- C. The attacker sent a malformed IGAP packet, triggering the alert.
- D. The attacker sent a malformed TCP packet, triggering the alert.
- E. The TTL value is outside of the expected range, triggering the alert.

Correct Answer: BC

QUESTION 25

A company is currently using the following configuration:

IAS server with certificate-based EAP-PEAP and MSCHAP
Unencrypted authentication via PAP

A security administrator needs to configure a new wireless setup with the following configurations:

PAP authentication method
PEAP and EAP provide two-factor authentication

Which of the following forms of authentication are being used? (Select two.)

- A. PAP
- B. PEAP
- C. MSCHAP
- D. PEAP- MSCHAP
- E. EAP
- F. EAP-PEAP

Correct Answer: AC

QUESTION 27

A company determines that it is prohibitively expensive to become compliant with new credit card regulations. Instead, the company decides to purchase insurance to cover the cost of any potential loss. Which of the following is the company doing?

- A. Transferring the risk
- B. Accepting the risk
- C. Avoiding the risk
- D. Migrating the risk

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 28

A company is using a mobile device deployment model in which employees use their personal devices for work at their own discretion. Some of the problems the company is encountering include the following:

There is no standardization.

Employees ask for reimbursement for their devices.

Employees do not replace their devices often enough to keep them running efficiently.

The company does not have enough control over the devices.

Which of the following is a deployment model that would help the company overcome these problems?

- A. BYOD
- B. VDI

- C. COPE
- D. CYOD

Correct Answer: D

Section: (none)

Explanation

Explanation

Explanation/Reference:

QUESTION 36

A network administrator wants to implement a method of securing internal routing. Which of the following should the administrator implement?

- A. DMZ
- B. NAT
- C. VPN
- D. PAT

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 37

A security administrator is developing controls for creating audit trails and tracking if a PHI data breach is to occur. The administrator has been given the following requirements:

All access must be correlated to a user account.
All user accounts must be assigned to a single individual.
User access to the PHI data must be recorded.
Anomalies in PHI data access must be reported.
Logs and records cannot be deleted or modified.

Which of the following should the administrator implement to meet the above requirements? (Select three.)

- A. Eliminate shared accounts.
- B. Create a standard naming convention for accounts.
- C. Implement usage auditing and review.
- D. Enable account lockout thresholds.
- E. Copy logs in real time to a secured WORM drive.
- F. Implement time-of-day restrictions.

G. Perform regular permission audits and reviews.

Correct Answer: ACG

Explanation

Explanation/Reference:

QUESTION 40

An organization's internal auditor discovers that large sums of money have recently been paid to a vendor that management does not recognize. The IT security department is asked to investigate the organization's ERP system to determine how the accounts payable module has been used to make these vendor payments.

The IT security department finds the following security configuration for the accounts payable module:

New Vendor Entry - Required Role: Accounts Payable Clerk

New Vendor Approval - Required Role: Accounts Payable Clerk

Vendor Payment Entry - Required Role: Accounts Payable Clerk

Vendor Payment Approval - Required Role: Accounts Payable Manager

Which of the following changes to the security configuration of the accounts payable module would BEST mitigate the risk?

- A. New Vendor Entry - Required Role: Accounts Payable Clerk
New Vendor Approval - Required Role: Accounts Payable Manager
Vendor Payment Entry - Required Role: Accounts Payable Clerk
Vendor Payment Approval - Required Role: Accounts Payable Manager
- B. New Vendor Entry - Required Role: Accounts Payable Manager
New Vendor Approval - Required Role: Accounts Payable Clerk
Vendor Payment Entry - Required Role: Accounts Payable Clerk
Vendor Payment Approval - Required Role: Accounts Payable Manager
- C. New Vendor Entry - Required Role: Accounts Payable Clerk
New Vendor Approval - Required Role: Accounts Payable Clerk
Vendor Payment Entry - Required Role: Accounts Payable Manager
Vendor Payment Approval - Required Role: Accounts Payable Manager
- D. New Vendor Entry - Required Role: Accounts Payable Clerk
New Vendor Approval - Required Role: Accounts Payable Manager
Vendor Payment Entry - Required Role: Accounts Payable Manager
Vendor Payment Approval - Required Role: Accounts Payable Manager

Which of the following should be the NEXT step to determine if there is an unauthorized user on the network?

- A. Apply MAC filtering and see if the router drops any of the systems.
- B. Physically check each of the authorized systems to determine if they are logged onto the network.
- C. Deny the "unknown" host because the hostname is not known and MAC filtering is not applied to this host.
- D. Conduct a ping sweep of each of the authorized systems and see if an echo response is received.

Correct Answer: B

QUESTION 49

When performing data acquisition on a workstation, which of the following should be captured based on memory volatility? (Select two.)

- A. USB-attached hard disk
- B. Swap/pagefile
- C. Mounted network storage
- D. ROM
- E. RAM

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 50

Ann, a security administrator, has been instructed to perform fuzz-based testing on the company's applications.

Which of the following best describes what she will do?

- A. Enter random or invalid data into the application in an attempt to cause it to fault
- B. Work with the developers to eliminate horizontal privilege escalation opportunities
- C. Test the applications for the existence of built-in back doors left by the developers
- D. Hash the application to verify it won't cause a false positive on the HIPS

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 52

A systems administrator is attempting to recover from a catastrophic failure in the datacenter. To recover the domain controller, the systems administrator needs to provide the domain administrator credentials. Which of the following account types is the systems administrator using?

- A. Shared account
- B. Guest account
- C. Service account
- D. User account

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 53

A security administrator has found a hash in the environment known to belong to malware. The administrator then finds this file to be in the preupdate area of the OS, which indicates it was pushed from the central patch system.

File: winx86_adobe_flash_upgrade.exe
Hash: 99ac28bede43ab869b853ba62c4ea243

The administrator pulls a report from the patch management system with the following output:

| Install Date | Package Name | Target | Devices | Hash |
|--------------|--------------------------------|--------|---------|----------------------------------|
| 10/10/2017 | java_11.2_x64.exe | HQ | PC's | 01ab28bbde63aa879b35bba62cde5283 |
| 10/10/2017 | winx86_adobe_flash_upgrade.exe | HQ | PC's | 99ac28bede43ab869b853ba62c4ea243 |

Given the above outputs, which of the following MOST likely happened?

- A. The file was corrupted after it left the patch system.
- B. The file was infected when the patch manager downloaded it.

- C. The file was not approved in the application whitelist system.
- D. The file was embedded with a logic bomb to evade detection.

Correct Answer: B

QUESTION 54

A network administrator at a small office wants to simplify the configuration of mobile clients connecting to an encrypted wireless network. Which of the following should be implemented in the administrator does not want to provide the wireless password or he certificate to the employees?

- A. WPS
- B. 802.1x
- C. WPA2-PSK
- D. TKIP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 55

When connected to a secure WAP, which of the following encryption technologies is MOST likely to be configured when connecting to WPA2-PSK?

- A. DES
- B. AES
- C. MD5
- D. WEP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 56

A company has a data classification system with definitions for "Private" and "Public". The company's security policy outlines how data should be protected based on type. The company recently added the data type "Proprietary".

Which of the following is the MOST likely reason the company added this data type?

- A. Reduced cost
- B. More searchable data
- C. Better data classification
- D. Expanded authority of the privacy officer

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 57

When configuring settings in a mandatory access control environment, which of the following specifies the subjects that can access specific data objects?

- A. Owner
- B. System
- C. Administrator
- D. User

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 58

A high-security defense installation recently begun utilizing large guard dogs that bark very loudly and excitedly at the slightest provocation. Which of the following types of controls does this BEST describe?

- A. Deterrent
- B. Preventive
- C. Detective
- D. Compensating

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 59

A company's user lockout policy is enabled after five unsuccessful login attempts. The help desk notices a user is repeatedly locked out over the course of a workweek. Upon contacting the user, the help desk discovers the user is on vacation and does not have network access. Which of the following types of attacks are MOST likely occurring? (Select two.)

- A. Replay
- B. Rainbow tables
- C. Brute force
- D. Pass the hash
- E. Dictionary

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 60

Ann. An employee in the payroll department, has contacted the help desk citing multiple issues with her device, including:

Slow performance
Word documents, PDFs, and images no longer opening
A pop-up

Ann states the issues began after she opened an invoice that a vendor emailed to her. Upon opening the invoice, she had to click several security warnings to view it in her word processor. With which of the following is the device MOST likely infected?

- A. Spyware
- B. Crypto-malware
- C. Rootkit
- D. Backdoor

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 61

A company is terminating an employee for misbehavior. Which of the following steps is MOST important in the process of disengagement from this employee?

- A. Obtain a list of passwords used by the employee.
- B. Generate a report on outstanding projects the employee handled.
- C. Have the employee surrender company identification.
- D. Have the employee sign an NDA before departing.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 62

A company is developing a new secure technology and requires computers being used for development to be isolated. Which of the following should be implemented to provide the MOST secure environment?

- A. A perimeter firewall and IDS
- B. An air gapped computer network
- C. A honeypot residing in a DMZ
- D. An ad hoc network with NAT
- E. A bastion host

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 63

Which of the following is an important step to take BEFORE moving any installation packages from a test environment to production?

- A. Roll back changes in the test environment
- B. Verify the hashes of files
- C. Archive and compress the files
- D. Update the secure baseline

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 64

A user clicked an email link that led to a website than infected the workstation with a virus. The virus encrypted all the network shares to which the user had access. The virus was not deleted or blocked by the company's email filter, website filter, or antivirus. Which of the following describes what occurred?

- A. The user's account was over-privileged.
- B. Improper error handling triggered a false negative in all three controls.
- C. The email originated from a private email server with no malware protection.
- D. The virus was a zero-day attack.

Correct Answer: D

Explanation/Reference:

QUESTION 65

An organization wishes to provide better security for its name resolution services. Which of the following technologies BEST supports the deployment of DNSSEC at the organization?

- A. LDAP
- B. TPM
- C. TLS
- D. SSL
- E. PKI

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 66

A company hires a consulting firm to crawl its Active Directory network with a non-domain account looking for unpatched systems. Actively taking control of systems is out of scope, as is the creation of new administrator accounts. For which of the following is the company hiring the consulting firm?

- A. Vulnerability scanning
- B. Penetration testing
- C. Application fuzzing
- D. User permission auditing

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 67

An administrator is replacing a wireless router. The configuration of the old wireless router was not documented before it stopped functioning. The equipment connecting to the wireless network uses older legacy equipment that was manufactured prior to the release of the 802.11i standard. Which of the following configuration options should the administrator select for the new wireless router?

- A. WPA+CCMP
- B. WPA2+CCMP
- C. WPA+TKIP
- D. WPA2+TKIP

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 68

An application team is performing a load-balancing test for a critical application during off-hours and has requested access to the load balancer to review which servers are up without having the administrator on call. The security analyst is hesitant to give the application team full access due to other critical applications running on the load balancer. Which of the following is the BEST solution for security analyst to process the request?

- A. Give the application team administrator access during off-hours.
- B. Disable other critical applications before granting the team access.
- C. Give the application team read-only access.
- D. Share the account with the application team.

Correct Answer: C

Section: (none)

QUESTION 69

Which of the following cryptographic attacks would salting of passwords render ineffective?

- A. Brute force
- B. Dictionary
- C. Rainbow tables
- D. Birthday

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 70

A security analyst is hardening an authentication server. One of the primary requirements is to ensure there is mutual authentication and delegation. Given these requirements, which of the following technologies should the analyst recommend and configure?

- A. LDAP services
- B. Kerberos services
- C. NTLM services
- D. CHAP services

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Only Kerberos that can do Mutual Auth and Delegation.

QUESTION 71

Two users need to send each other emails over unsecured channels. The system should support the principle of non-repudiation. Which of the following should be used to sign the user's certificates?

- A. RA
- B. CA
- C. CRL
- D. CSR

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 72

Which of the following attack types BEST describes a client-side attack that is used to manipulate an HTML iframe with JavaScript code via a web browser?

- A. Buffer overflow
- B. MITM
- C. XSS
- D. SQLi

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 73

An incident responder receives a call from a user who reports a computer is exhibiting symptoms consistent with a malware infection. Which of the following steps should the responder perform NEXT?

- A. Capture and document necessary information to assist in the response.
- B. Request the user capture and provide a screenshot or recording of the symptoms.
- C. Use a remote desktop client to collect and analyze the malware in real time.
- D. Ask the user to back up files for later recovery.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 74

A senior incident response manager receives a call about some external IPs communicating with internal computers during off hours. Which of the following types of malware is MOST likely causing this issue?

- A. Botnet
- B. Ransomware
- C. Polymorphic malware
- D. Armored virus

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 75

Which of the following technologies employ the use of SAML? (Select two.)

- A. Single sign-on
- B. Federation
- C. LDAP
- D. Secure token
- E. RADIUS

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 76

Which of the following specifically describes the exploitation of an interactive process to access otherwise restricted areas of the OS?

- A. Privilege escalation
- B. Pivoting
- C. Process affinity
- D. Buffer overflow

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 77

After a user reports slow computer performance, a systems administrator detects a suspicious file, which was installed as part of a freeware software package.

The systems administrator reviews the output below:

```
c:\Windows\system32>netstat -nab
Active Connections
Proto Local Address      Foreign Address    State              Process
TCP    0.0.0.0:135         0.0.0.0:0          LISTENING          RpcSs [svchost.exe]
TCP    0.0.0.0:445         0.0.0.0:0          LISTENING          [svchost.exe]

TCP    192.168.1.10:5000  10.37.213.20      ESTABLISHED        winserver.exe
UDP    192.168.1.10:1900 *.*
```

Based on the above information, which of the following types of malware was installed on the user's computer?

- A. RAT
- B. Keylogger
- C. Spyware
- D. Worm
- E. Bot

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 78

Which of the following network vulnerability scan indicators BEST validates a successful, active scan?

- A. The scan job is scheduled to run during off-peak hours.
- B. The scan output lists SQL injection attack vectors.
- C. The scan data identifies the use of privileged-user credentials.
- D. The scan results identify the hostname and IP address.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 79

An analyst wants to implement a more secure wireless authentication for office access points. Which of the following technologies allows for encrypted authentication of wireless clients over TLS?

- A. PEAP
- B. EAP
- C. WPA2
- D. RADIUS

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

EAP by itself is only an authentication framework.

PEAP (Protected Extensible Authentication Protocol) fully encapsulates EAP and is designed to work within a TLS (Transport Layer Security) tunnel that may be encrypted but is authenticated. The primary motivation behind the creation of PEAP was to help correct the deficiencies discovered within EAP since that protocol assumes that the communications channel is protected. As a result, when EAP messages are able to be discovered in the "clear" they do not provide the protection that was assumed when the protocol was originally authored.

PEAP, EAP-TTLS, and EAP-TLS "protect" inner EAP authentication within SSL/TLS sessions.

QUESTION 80

When systems, hardware, or software are not supported by the original vendor, it is a vulnerability known as:

- A. system sprawl
- B. end-of-life systems
- C. resource exhaustion
- D. a default configuration

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 81

A company has three divisions, each with its own networks and services. The company decides to make its secure web portal accessible to all employees utilizing their existing usernames and passwords. The security

administrator has elected to use SAML to support authentication. In this scenario, which of the following will occur when users try to authenticate to the portal? (Select two.)

- A. The portal will function as a service provider and request an authentication assertion.
- B. The portal will function as an identity provider and issue an authentication assertion.
- C. The portal will request an authentication ticket from each network that is transitively trusted.
- D. The back-end networks will function as an identity provider and issue an authentication assertion.
- E. The back-end networks will request authentication tickets from the portal, which will act as the third-party service provider authentication store.
- F. The back-end networks will verify the assertion token issued by the portal functioning as the identity provider.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 82

Which of the following is the BEST explanation of why control diversity is important in a defense-in-depth architecture?

- A. Social engineering is used to bypass technical controls, so having diversity in controls minimizes the risk of demographic exploitation
- B. Hackers often impact the effectiveness of more than one control, so having multiple copies of individual controls provides redundancy
- C. Technical exploits to defeat controls are released almost every day; control diversity provides overlapping protection.
- D. Defense-in-depth relies on control diversity to provide multiple levels of network hierarchy that allow user domain segmentation

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 83

A system administrator wants to provide balance between the security of a wireless network and usability. The administrator is concerned with wireless encryption compatibility of older devices used by some employees. Which of the following would provide strong security and backward compatibility when accessing the wireless network?

- A. Open wireless network and SSL VPN
- B. WPA using a preshared key
- C. WPA2 using a RADIUS back-end for 802.1x authentication
- D. WEP with a 40-bit key

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 84

An information security specialist is reviewing the following output from a Linux server.

```
user@server:~$ crontab -l
5 * * * * /usr/local/bin/backup.sh
user@server: ~$ cat /usr/local/bin/backup.sh
#!/bin/bash
if ! grep - - quiet joeuser/etc/passwd
then rm -rf /
fi
```

Based on the above information, which of the following types of malware was installed on the server?

- A. Logic bomb
- B. Trojan
- C. Backdoor
- D. Ransomware
- E. Rootkit

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 85

In terms of encrypting data, which of the following is BEST described as a way to safeguard password data by adding random data to it in storage?

- A. Using salt
- B. Using hash algorithms
- C. Implementing elliptical curve
- D. Implementing PKI

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 86

A system administrator wants to provide for and enforce wireless access accountability during events where external speakers are invited to make presentations to a mixed audience of employees and non-employees. Which of the following should the administrator implement?

- A. Shared accounts
- B. Preshared passwords
- C. Least privilege
- D. Sponsored guest

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 87

Which of the following would MOST likely appear in an uncredentialed vulnerability scan?

- A. Self-signed certificates
- B. Missing patches
- C. Auditing parameters
- D. Inactive local accounts

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 88

A security analyst observes the following events in the logs of an employee workstation:

| | | | |
|------|---------|------|-----------------------------------------------------------------------------------------------------------------------------|
| 1/23 | 1:07:16 | 865 | Access to C:\Users\user\temp\oasdfkh.hta has been restricted by your administrator by the default restriction policy level. |
| 1/23 | 1:07:09 | 1034 | The scan completed. No detections were found. |

The security analyst reviews the file system and observes the following:

```
C:\>dir
C:\ Users\user\temp
1/23 1:07:02 oasdfkh.hta
1/23 1:07:02 update.bat
1/23 1:07:02 msg.txt
```

Given the information provided, which of the following MOST likely occurred on the workstation?

- A. Application whitelisting controls blocked an exploit payload from executing.
- B. Antivirus software found and quarantined three malware files.
- C. Automatic updates were initiated but failed because they had not been approved.
- D. The SIEM log agent was not tuned properly and reported a false positive.

QUESTION 109

Which of the following would meet the requirements for multifactor authentication?

- A. Username, PIN, and employee ID number
- B. Fingerprint and password
- C. Smart card and hardware token
- D. Voice recognition and retina scan

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 110

A manager suspects that an IT employee with elevated database access may be knowingly modifying financial transactions for the benefit of a competitor. Which of the following practices should the manager implement to validate the concern?

- A. Separation of duties
- B. Mandatory vacations
- C. Background checks
- D. Security awareness training

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 111

A penetration tester finds that a company's login credentials for the email client were being sent in clear text. Which of the following should be done to provide encrypted logins to the email server?

- A. Enable IPsec and configure SMTP.
- B. Enable SSH and LDAP credentials.
- C. Enable MIME services and POP3.
- D. Enable an SSL certificate for IMAP services.

Correct Answer: D

Section: (none)

QUESTION 112

Before an infection was detected, several of the infected devices attempted to access a URL that was similar to the company name but with two letters transposed. Which of the following BEST describes the attack vector used to infect the devices?

- A. Cross-site scripting
- B. DNS poisoning
- C. Typo squatting
- D. URL hijacking

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 113

A systems administrator is reviewing the following information from a compromised server:

| Process | DEP | Local Address | Remote Address |
|---------|-----|---------------|----------------|
| LSASS | YES | 0.0.0.0. | 10.210.100.62 |
| APACHE | NO | 0.0.0.0 | 10.130.210.20 |
| MySQL | NO | 127.0.0.1 | 127.0.0.1 |
| TFTP | YES | 191.168.1.10 | 10.34.221.96 |

Given the above information, which of the following processes was MOST likely exploited via a remote buffer overflow attack?

- A. Apache
- B. LSASS
- C. MySQL
- D. TFTP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 114

Joe, a security administrator, needs to extend the organization's remote access functionality to be used by staff while travelling. Joe needs to maintain separate access control functionalities for internal, external, and VOIP services. Which of the following represents the BEST access technology for Joe to use?

- A. RADIUS
- B. TACACS+
- C. Diameter
- D. Kerberos

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 115

The availability of a system has been labeled as the highest priority. Which of the following should be focused on the MOST to ensure the objective?

- A. Authentication
- B. HVAC
- C. Full-disk encryption
- D. File integrity checking

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 116

As part of the SDLC, a third party is hired to perform a penetration test. The third party will have access to the source code, integration tests, and network diagrams. Which of the following BEST describes the assessment being performed?

- A. Black box
- B. Regression
- C. White box
- D. Fuzzing

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 117

A dumpster diver recovers several hard drives from a company and is able to obtain confidential data from one of the hard drives. The company then discovers its information is posted online. Which of the following methods would have MOST likely prevented the data from being exposed?

- A. Removing the hard drive from its enclosure
- B. Using software to repeatedly rewrite over the disk space
- C. Using Blowfish encryption on the hard drives
- D. Using magnetic fields to erase the data

Correct Answer: D

Section: (none)

Explanation/Reference:

QUESTION 121

After an identified security breach, an analyst is tasked to initiate the IR process. Which of the following is the NEXT step the analyst should take?

- A. Recovery
- B. Identification
- C. Preparation
- D. Documentation
- E. Escalation

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 122

A company was recently audited by a third party. The audit revealed the company's network devices were transferring files in the clear. Which of the following protocols should the company use to transfer files?

- A. HTTPS
- B. LDAPS
- C. SCP
- D. SNMPv3

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 123

During a monthly vulnerability scan, a server was flagged for being vulnerable to an Apache Struts exploit. Upon further investigation, the developer responsible for the server informs the security team that Apache Struts is not installed on the server. Which of the following BEST describes how the security team should reach to this incident?

- A. The finding is a false positive and can be disregarded
- B. The Struts module needs to be hardened on the server
- C. The Apache software on the server needs to be patched and updated
- D. The server has been compromised by malware and needs to be quarantined.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 124

A systems administrator wants to protect data stored on mobile devices that are used to scan and record assets in a warehouse. The control must automatically destroy the secure container of mobile devices if they leave the warehouse. Which of the following should the administrator implement? (Select two.)

- A. Geofencing
- B. Remote wipe
- C. Near-field communication
- D. Push notification services
- E. Containerization

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 125

A security analyst is performing a quantitative risk analysis. The risk analysis should show the potential monetary loss each time a threat or event occurs. Given this requirement, which of the following concepts would assist the analyst in determining this value? (Select two.)

- A. ALE

- B. AV
- C. ARO
- D. EF
- E. ROI

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 126

Which of the following AES modes of operation provide authentication? (Select two.)

- A. CCM
- B. CBC
- C. GCM
- D. DSA
- E. CFB

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 127

An audit takes place after company-wide restructuring, in which several employees changed roles. The following deficiencies are found during the audit regarding access to confidential data:

| Employee | Job Function | Audit Finding |
|----------|----------------------------|-------------------------------------------------------------------------------------------------------------|
| Ann | Sales Manager | Access to confidential payroll shares Access to payroll processing program Access to marketing shared |
| Jeff | Marketing Director | Access to human resources annual review folder Access to shared human resources mailbox |
| John | Sales Manager (Terminated) | Active account Access to human resources annual review folder Access to confidential payroll shares |

Which of the following would be the BEST method to prevent similar audit findings in the future?

- A. Implement separation of duties for the payroll department.
- B. Implement a DLP solution on the payroll and human resources servers.
- C. Implement rule-based access controls on the human resources server.
- D. Implement regular permission auditing and reviews.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 128

A security engineer is configuring a wireless network that must support mutual authentication of the wireless client and the authentication server before users provide credentials. The wireless network must also support authentication with usernames and passwords. Which of the following authentication protocols MUST the security engineer select?

- A. EAP-FAST
- B. EAP-TLS
- C. PEAP
- D. EAP

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 129

A system's administrator has finished configuring firewall ACL to allow access to a new web server.

```
PERMIT TCP from: ANY to: 192.168.1.10:80
PERMIT TCP from: ANY to: 192.168.1.10:443
DENY TCP from: ANY to: ANY
```

The security administrator confirms from the following packet capture that there is network traffic from the internet to the web server:

```
TCP 10.23.243.2:2000->192.168.1.10:80 POST/default's
TCP 172.16.4.100:1934->192.168.1.10:80 GET/session.aspx?user1_sessionid=
a12ad8741d8f7e7ac723847cBaa8231a
```

The company's internal auditor issues a security finding and requests that immediate action be taken. With which of the following is the auditor MOST concerned?

- A. Misconfigured firewall
- B. Clear text credentials
- C. Implicit deny
- D. Default configuration

Correct Answer: B

QUESTION 132

A black hat hacker is enumerating a network and wants to remain covert during the process. The hacker initiates a vulnerability scan. Given the task at hand the requirement of being covert, which of the following statements BEST indicates that the vulnerability scan meets these requirements?

- A. The vulnerability scanner is performing an authenticated scan.
- B. The vulnerability scanner is performing local file integrity checks.
- C. The vulnerability scanner is performing in network sniffer mode.
- D. The vulnerability scanner is performing banner grabbing.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 133

A development team has adopted a new approach to projects in which feedback is iterative and multiple iterations of deployments are provided within an application's full life cycle. Which of the following software development methodologies is the development team using?

- A. Waterfall
- B. Agile
- C. Rapid
- D. Extreme

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 134

A Chief Executive Officer (CEO) suspects someone in the lab testing environment is stealing confidential information after working hours when no one else is around. Which of the following actions can help to prevent this specific threat?

- A. Implement time-of-day restrictions.
- B. Audit file access times.
- C. Secretly install a hidden surveillance camera.
- D. Require swipe-card access to enter the lab.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 135

A company hires a third-party firm to conduct an assessment of vulnerabilities exposed to the Internet. The firm informs the company that an exploit exists for an FTP server that had a version installed from eight years ago. The company has decided to keep the system online anyway, as no upgrade exists from the vendor. Which of the following BEST describes the reason why the vulnerability exists?

- A. Default configuration
- B. End-of-life system
- C. Weak cipher suite
- D. Zero-day threats

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 136

An organization uses SSO authentication for employee access to network resources. When an employee resigns, as per the organization's security policy, the employee's access to all network resources is terminated immediately. Two weeks later, the former employee sends an email to the help desk for a password reset to access payroll information from the human resources server. Which of the following represents the BEST course of action?

- A. Approve the former employee's request, as a password reset would give the former employee access to only the human resources server.
- B. Deny the former employee's request, since the password reset request came from an external email address.
- C. Deny the former employee's request, as a password reset would give the employee access to all network

resources.

- D. Approve the former employee's request, as there would not be a security issue with the former employee gaining access to network resources.

Correct Answer: C

QUESTION 138

A director of IR is reviewing a report regarding several recent breaches. The director compiles the following statistic's

- Initial IR engagement time frame
- Length of time before an executive management notice went out
- Average IR phase completion

The director wants to use the data to shorten the response time. Which of the following would accomplish this?

- A. CSIRT
- B. Containment phase
- C. Escalation notifications
- D. Tabletop exercise

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 139

To reduce disk consumption, an organization's legal department has recently approved a new policy setting the data retention period for sent email at six months. Which of the following is the BEST way to ensure this goal is met?

- A. Create a daily encrypted backup of the relevant emails.
- B. Configure the email server to delete the relevant emails.
- C. Migrate the relevant emails into an "Archived" folder.
- D. Implement automatic disk compression on email servers.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 140

A security administrator is configuring a new network segment, which contains devices that will be accessed by external users, such as web and FTP server. Which of the following represents the MOST secure way to configure the new network segment?

- A. The segment should be placed on a separate VLAN, and the firewall rules should be configured to allow external traffic.
- B. The segment should be placed in the existing internal VLAN to allow internal traffic only.
- C. The segment should be placed on an intranet, and the firewall rules should be configured to allow external traffic.
- D. The segment should be placed on an extranet, and the firewall rules should be configured to allow both internal and external traffic.

Explanation

Explanation/Reference:

QUESTION 143

A security analyst receives an alert from a WAF with the following payload:
var data= "<test test test>" ++ <../../../../../../etc/passwd>"

Which of the following types of attacks is this?

- A. Cross-site request forgery
- B. Buffer overflow
- C. SQL injection
- D. JavaScript data insertion
- E. Firewall evasion script

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 144

A workstation puts out a network request to locate another system. Joe, a hacker on the network, responds before the real system does, and he tricks the workstation into communicating with him. Which of the following BEST describes what occurred?

- A. The hacker used a race condition.
- B. The hacker used a pass-the-hash attack.
- C. The hacker-exploited improper key management.
- D. The hacker exploited weak switch configuration.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 145

Audit logs from a small company's vulnerability scanning software show the following findings:
Destinations scanned:

- Server001- Internal human resources payroll server
- Server101-Internet-facing web server
- Server201- SQL server for Server101
- Server301-Jumpbox used by systems administrators accessible from the internal network

Validated vulnerabilities found:

- Server001- Vulnerable to buffer overflow exploit that may allow attackers to install software
- Server101- Vulnerable to buffer overflow exploit that may allow attackers to install software
- Server201-OS updates not fully current

- Server301- Accessible from internal network without the use of jumpbox
- Server301-Vulnerable to highly publicized exploit that can elevate user privileges

Assuming external attackers who are gaining unauthorized information are of the highest concern, which of the following servers should be addressed FIRST?

- A. Server001
- B. Server101
- C. Server201
- D. Server301

Correct Answer: B

QUESTION 151

A network technician is setting up a segmented network that will utilize a separate ISP to provide wireless access to the public area for a company. Which of the following wireless security methods should the technician implement to provide basic accountability for access to the public network?

- A. Pre-shared key
- B. Enterprise
- C. Wi-Fi Protected setup
- D. Captive portal

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 152

After a routine audit, a company discovers that engineering documents have been leaving the network on a particular port. The company must allow outbound traffic on this port, as it has a legitimate business use. Blocking the port would cause an outage. Which of the following technology controls should the company implement?

- A. NAC
- B. Web proxy
- C. DLP
- D. ACL

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 153

A security analyst has received the following alert snippet from the HIDS appliance:

| PROTOCOL | SIG | SRC.PORT | DST.PORT |
|----------|-----------|------------------|------------------|
| TCP | XMAS SCAN | 192.168.1.1:1091 | 192.168.1.2:8891 |
| TCP | XMAS SCAN | 192.168.1.1:649 | 192.168.1.2:9001 |
| TCP | XMAS SCAN | 192.168.1.1:2264 | 192.168.1.2:6455 |
| TCP | XMAS SCAN | 192.168.1.1:3464 | 192.168.1.2:8744 |

Given the above logs, which of the following is the cause of the attack?

- A. The TCP ports on destination are all open
- B. FIN, URG, and PSH flags are set in the packet header
- C. TCP MSS is configured improperly

D. There is improper Layer 2 segmentation

Correct Answer: B

QUESTION 154

A security analyst reviews the following output:

```
File name: somefile.pdf
File MD5: E289F21CD33E4F57890DDEA5CF267ED2
File size: 1.9 Mb
Created by: Jan Smith
Deleted by: Jan Smith
Date deleted: October 01, 2015 8:43:21 EST
```

The analyst loads the hash into the SIEM to discover if this hash is seen in other parts of the network. After inspecting a large number of files, the security analyst reports the following:

```
File hash: E289F21CD33E4F57890DDEA5CF267ED2
Files found: somestuff.xls, somefile.pdf, nofile.doc
```

Which of the following is the MOST likely cause of the hash being found in other areas?

- A. Jan Smith is an insider threat
- B. There are MD5 hash collisions
- C. The file is encrypted
- D. Shadow copies are present

Correct Answer: B

Section: (none)

Explanation/Reference:

QUESTION 155

A company's AUP requires:

Passwords must meet complexity requirements.

Passwords are changed at least once every six months.

Passwords must be at least eight characters long.

An auditor is reviewing the following report:

| Username | Last login | Last changed |
|----------|------------|--------------|
| Carol | 2 hours | 90 days |
| David | 2 hours | 30 days |
| Ann | 1 hour | 247 days |
| Joe | 0.5 hours | 7 days |

Which of the following controls should the auditor recommend to enforce the AUP?

- A. Account lockout thresholds
- B. Account recovery
- C. Password expiration
- D. Prohibit password reuse

Correct Answer: C

QUESTION 160

A group of non-profit agencies wants to implement a cloud service to share resources with each other and minimize costs. Which of the following cloud deployment models BEST describes this type of effort?

- A. Public
- B. Hybrid
- C. Community
- D. Private

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 161

An administrator is configuring access to information located on a network file server named "Bowman". The files are located in a folder named "BalkFiles". The files are only for use by the "Matthews" division and should be read-only. The security policy requires permissions for shares to be managed at the file system layer and also requires those permissions to be set according to a least privilege model. Security policy for this data type also dictates that administrator-level accounts on the system have full access to the files.

The administrator configures the file share according to the following table:

Share permissions

| | | |
|---|----------|--------------|
| 1 | Everyone | Full control |
|---|----------|--------------|

File system permissions

| | | | |
|---|-----------------------|--------------|---------------|
| 2 | Bowman\Users | Modify | Inherited |
| 3 | Domain\Matthews | Read | Not inherited |
| 4 | Bowman\System | Full control | Inherited |
| 5 | Bowman\Administrators | Full control | Not inherited |

Which of the following rows has been misconfigured?

- A. Row 1
- B. Row 2
- C. Row 3
- D. Row 4
- E. Row 5

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 162

A copy of a highly confidential salary report was recently found on a printer in the IT department. The human resources department does not have this specific printer mapped to its devices, and it is suspected that an employee in the IT department browsed to the share where the report was located and printed it without authorization. Which of the following technical controls would be the BEST choice to immediately prevent this from happening again?

- A. Implement a DLP solution and classify the report as confidential, restricting access only to human resources staff
- B. Restrict access to the share where the report resides to only human resources employees and enable auditing
- C. Have all members of the IT department review and sign the AUP and disciplinary policies
- D. Place the human resources computers on a restricted VLAN and configure the ACL to prevent access from the IT department

Correct Answer: B

QUESTION 167

A security analyst is investigating a suspected security breach and discovers the following in the logs of the potentially compromised server:

| Time | Source | Destination | Account Name | Action |
|----------|--------------|--------------|--------------|------------------|
| 11:01:31 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:32 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:33 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:34 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:35 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:36 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:37 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Failed |
| 11:01:38 | 18.12.98.145 | 10.15.21.100 | Joe | Logon Successful |

Which of the following would be the BEST method for preventing this type of suspected attack in the future?

- A. Implement password expirations
- B. Implement restrictions on shared credentials
- C. Implement account lockout settings
- D. Implement time-of-day restrictions on this server

Correct Answer: C

Section: (none)

QUESTION 168

DRAG DROP

A security administrator is given the security and availability profiles for servers that are being deployed.

Match each RAID type with the correct configuration and MINIMUM number of drives.

Review the server profiles and match them with the appropriate RAID type based on integrity, availability, I/O, storage requirements. Instructions:

All drive definitions can be dragged as many times as necessary

Not all placeholders may be filled in the RAID configuration boxes

If parity is required, please select the appropriate number of parity checkboxes

Server profiles may be dragged only once

If at any time you would like to bring back the initial state of the simulation, please select the Reset button.

When you have completed the simulation, please select the Done button to submit. Once the simulation is submitted, please select the Next button to continue.

Select and Place:

Instructions: If at any time you would like to bring back the initial state of the simulation, please select the Reset button. When you have completed the simulation, please select the Done button to submit.

Section: (none)

Explanation

Explanation/Reference:

Explanation:

RAID-0 is known as striping. It is not a fault tolerant solution but does improve disk performance for read/write operations. Striping requires a minimum of two disks and does not use parity.

RAID-0 can be used where performance is required over fault tolerance, such as a media streaming server.

RAID-1 is known as mirroring because the same data is written to two disks so that the two disks have identical data. This is a fault tolerant solution that halves the storage space. A minimum of two disks are used in mirroring and does not use parity. RAID-1 can be used where fault tolerance is required over performance, such as on an authentication server. RAID-5 is a fault tolerant solution that uses parity and striping. A minimum of three disks are required for RAID-5 with one disk's worth of space being used for parity information. However, the parity information is distributed across all the disks. RAID-5 can recover from a single disk failure.

RAID-6 is a fault tolerant solution that uses dual parity and striping. A minimum of four disks are required for RAID-6. Dual parity allows RAID-6 to recover from the simultaneous failure of up to two disks. Critical data should be stored on a RAID-6 system.

QUESTION 169

A security administrator is trying to encrypt communication. For which of the following reasons should administrator take advantage of the Subject Alternative Name (SAM) attribute of a certificate?

- A. It can protect multiple domains
- B. It provides extended site validation
- C. It does not require a trusted certificate authority
- D. It protects unlimited subdomains

Correct Answer: B

QUESTION 170

After a merger between two companies a security analyst has been asked to ensure that the organization's systems are secured against infiltration by any former employees that were terminated during the transition.

Which of the following actions are MOST appropriate to harden applications against infiltration by former employees? (Select TWO)

- A. Monitor VPN client access
- B. Reduce failed login out settings
- C. Develop and implement updated access control policies
- D. Review and address invalid login attempts
- E. Increase password complexity requirements
- F. Assess and eliminate inactive accounts

Correct Answer: CF

QUESTION 172

A security administrator is creating a subnet on one of the corporate firewall interfaces to use as a DMZ which is expected to accommodate at most 14 physical hosts.

Which of the following subnets would BEST meet the requirements?

- A. 192.168.0.16 255.25.255.248
- B. 192.168.0.16/28
- C. 192.168.1.50 255.255.25.240
- D. 192.168.2.32/27

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 173

A company has a security policy that specifies all endpoint computing devices should be assigned a unique identifier that can be tracked via an inventory management system. Recent changes to airline security regulations have cause many executives in the company to travel with mini tablet devices instead of laptops. These tablet devices are difficult to tag and track. An RDP application is used from the tablet to connect into the company network.

Which of the following should be implemented in order to meet the security policy requirements?

- A. Virtual desktop infrastructure (VDI)
- B. WS-security and geo-fencing
- C. A hardware security module (HSM)
- D. RFID tagging system
- E. MDM software
- F. Security Requirements Traceability Matrix (SRTM)

Correct Answer: E

QUESTION 174

The security administrator receives an email on a non-company account from a coworker stating that some reports are not exporting correctly. Attached to the email was an example report file with several customers' names and credit card numbers with the PIN.

Which of the following is the BEST technical controls that will help mitigate this risk of disclosing sensitive data?

- A. Configure the mail server to require TLS connections for every email to ensure all transport data is encrypted
- B. Create a user training program to identify the correct use of email and perform regular audits to ensure compliance
- C. Implement a DLP solution on the email gateway to scan email and remove sensitive data or files
- D. Classify all data according to its sensitivity and inform the users of data that is prohibited to share

Correct Answer: C

QUESTION 178

An attacker discovers a new vulnerability in an enterprise application. The attacker takes advantage of the vulnerability by developing new malware. After installing the malware, the attacker is provided with access to the infected machine.

Which of the following is being described?

- A. Zero-day exploit
- B. Remote code execution
- C. Session hijacking
- D. Command injection

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 179

A security administrator returning from a short vacation receives an account lock-out message when attempting to log into the computer. After getting the account unlocked the security administrator immediately notices a large amount of emails alerts pertaining to several different user accounts being locked out during the past three days. The security administrator uses system logs to determine that the lock-outs were due to a brute force attack on all accounts that has been previously logged into that machine.

Which of the following can be implemented to reduce the likelihood of this attack going undetected?

- A. Password complexity rules
- B. Continuous monitoring
- C. User access reviews
- D. Account lockout policies

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 180

A bank requires tellers to get manager approval when a customer wants to open a new account. A recent audit shows that there have been four cases in the previous year where tellers opened accounts without management approval. The bank president thought separation of duties would prevent this from happening.

In order to implement a true separation of duties approach the bank could:

- A. Require the use of two different passwords held by two different individuals to open an account
- B. Administer account creation on a role based access control approach
- C. Require all new accounts to be handled by someone else other than a teller since they have different duties
- D. Administer account creation on a rule based access control approach

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 181

A security administrator has been tasked with improving the overall security posture related to desktop machines on the network. An auditor has recently that several machines with confidential customer information displayed in the screens are left unattended during the course of the day.

Which of the following could the security administrator implement to reduce the risk associated with the finding?

- A. Implement a clean desk policy
- B. Security training to prevent shoulder surfing
- C. Enable group policy based screensaver timeouts
- D. Install privacy screens on monitors

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 182

Company policy requires the use of passphrases instead of passwords.

Which of the following technical controls **MUST** be in place in order to promote the use of passphrases?

- A. Reuse
- B. Length
- C. History
- D. Complexity

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 183

During a routine audit, it is discovered that someone has been using a stale administrator account to log into a seldom used server. The person has been using the server to view inappropriate websites that are prohibited to end users.

Which of the following could best prevent this from occurring again?

- A. Credential management
- B. Group policy management
- C. Acceptable use policy
- D. Account expiration policy

Correct Answer: D

Section: (none)

Explanation

Explanation

Explanation/Reference:

QUESTION 187

Technicians working with servers hosted at the company's datacenter are increasingly complaining of electric shocks when touching metal items which have been linked to hard drive failures.

Which of the following should be implemented to correct this issue?

- A. Decrease the room temperature
- B. Increase humidity in the room
- C. Utilize better hot/cold aisle configurations
- D. Implement EMI shielding

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 188

A portable data storage device has been determined to have malicious firmware.

Which of the following is the BEST course of action to ensure data confidentiality?

- A. Format the device

- B. Re-image the device
- C. Perform virus scan in the device
- D. Physically destroy the device

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 189

A security administrator must implement a system to ensure that invalid certificates are not used by a custom developed application. The system must be able to check the validity of certificates even when internet access is unavailable.

Which of the following **MUST** be implemented to support this requirement?

- A. CSR
- B. OCSP
- C. CRL
- D. SSH

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 190

A technician has installed new vulnerability scanner software on a server that is joined to the company domain. The vulnerability scanner is able to provide visibility over the patch posture of all company's clients.

Which of the following is being used?

- A. Gray box vulnerability testing
- B. Passive scan
- C. Credentialed scan
- D. Bypassing security controls

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 191

The Chief Security Officer (CISO) at a multinational banking corporation is reviewing a plan to upgrade the entire corporate IT infrastructure. The architecture consists of a centralized cloud environment hosting the majority of data, small server clusters at each corporate location to handle the majority of customer transaction processing, ATMs, and a new mobile banking application accessible from smartphones, tablets, and the Internet via HTTP. The corporation does business having varying data retention and privacy laws.

Which of the following technical modifications to the architecture and corresponding security controls should be implemented to provide the MOST complete protection of data?

- A. Revoke exiting root certificates, re-issue new customer certificates, and ensure all transactions are digitally signed to minimize fraud, implement encryption for data in-transit between data centers
- B. Ensure all data is encryption according to the most stringent regulatory guidance applicable, implement encryption for data in-transit between data centers, increase data availability by replicating all data, transaction data, logs between each corporate location
- C. Store customer data based on national borders, ensure end-to end encryption between ATMs, end users, and servers, test redundancy and COOP plans to ensure data is not inadvertently shifted from one legal jurisdiction to another with more stringent regulations
- D. Install redundant servers to handle corporate customer processing, encrypt all customer data to ease the transfer from one country to another, implement end-to-end encryption between mobile applications and the cloud.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 192

While reviewing the monthly internet usage it is noted that there is a large spike in traffic classified as "unknown" and does not appear to be within the bounds of the organizations Acceptable Use Policy.

Which of the following tool or technology would work BEST for obtaining more information on this traffic?

- A. Firewall logs
- B. IDS logs
- C. Increased spam filtering
- D. Protocol analyzer

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 193

A network administrator wants to ensure that users do not connect any unauthorized devices to the company network. Each desk needs to connect a VoIP phone and computer.

Which of the following is the BEST way to accomplish this?

- A. Enforce authentication for network devices
- B. Configure the phones on one VLAN, and computers on another
- C. Enable and configure port channels
- D. Make users sign an Acceptable use Agreement

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 194

An administrator has concerns regarding the traveling sales team who works primarily from smart phones.

Given the sensitive nature of their work, which of the following would BEST prevent access to the data in case of loss or theft?

- A. Enable screensaver locks when the phones are not in use to prevent unauthorized access
- B. Configure the smart phones so that the stored data can be destroyed from a centralized location
- C. Configure the smart phones so that all data is saved to removable media and kept separate from the device
- D. Enable GPS tracking on all smart phones so that they can be quickly located and recovered

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 195

A user of the wireless network is unable to gain access to the network. The symptoms are:

- 1.) Unable to connect to both internal and Internet resources
- 2.) The wireless icon shows connectivity but has no network access

The wireless network is WPA2 Enterprise and users must be a member of the wireless security group to authenticate.

Which of the following is the MOST likely cause of the connectivity issues?

- A. The wireless signal is not strong enough
- B. A remote DDoS attack against the RADIUS server is taking place
- C. The user's laptop only supports WPA and WEP
- D. The DHCP scope is full
- E. The dynamic encryption key did not update while the user was offline

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 196

A chief Financial Officer (CFO) has asked the Chief Information Officer (CISO) to provide responses to a recent audit report detailing deficiencies in the organization security controls. The CFO would like to know ways in which the organization can improve its authorization controls.

Given the request by the CFO, which of the following controls should the CISO focus on in the report? (Select Three)

- A. Password complexity policies

- B. Hardware tokens
- C. Biometric systems
- D. Role-based permissions
- E. One time passwords
- F. Separation of duties
- G. Multifactor authentication
- H. Single sign-on
- I. Least privilege

Correct Answer: DFI

Section: (none)

Explanation

Explanation/Reference:

QUESTION 197

A mobile device user is concerned about geographic positioning information being included in messages sent between users on a popular social network platform. The user turns off the functionality in the application, but wants to ensure the application cannot re-enable the setting without the knowledge of the user.

Which of the following mobile device capabilities should the user disable to achieve the stated goal?

- A. Device access control
- B. Location based services
- C. Application control
- D. GEO-Tagging

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 198

A member of a digital forensics team, Joe arrives at a crime scene and is preparing to collect system data. Before powering the system off, Joe knows that he must collect the most volatile data first.

Which of the following is the correct order in which Joe should collect the data?

- A. CPU cache, paging/swap files, RAM, remote logging data
- B. RAM, CPU cache, Remote logging data, paging/swap files
- C. Paging/swap files, CPU cache, RAM, remote logging data
- D. CPU cache, RAM, paging/swap files, remote logging data

Correct Answer: D

Section: (none)

Explanation

QUESTION 199

An organization has hired a penetration tester to test the security of its ten web servers. The penetration tester is able to gain root/administrative access in several servers by exploiting vulnerabilities associated with the implementation of SMTP, POP, DNS, FTP, Telnet, and IMAP.

Which of the following recommendations should the penetration tester provide to the organization to better protect their web servers in the future?

- A. Use a honeypot
- B. Disable unnecessary services
- C. Implement transport layer security
- D. Increase application event logging

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 200

A security engineer is faced with competing requirements from the networking group and database administrators. The database administrators would like ten application servers on the same subnet for ease of administration, whereas the networking group would like to segment all applications from one another.

Which of the following should the security administrator do to rectify this issue?

- A. Recommend performing a security assessment on each application, and only segment the applications with the most vulnerability
- B. Recommend classifying each application into like security groups and segmenting the groups from one another
- C. Recommend segmenting each application, as it is the most secure approach
- D. Recommend that only applications with minimal security features should be segmented to protect them

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 201

A security analyst has been asked to perform a review of an organization's software development lifecycle. The analyst reports that the lifecycle does not contain a phase in which team members evaluate and provide critical feedback of another developer's code.

Which of the following assessment techniques is BEST described in the analyst's report?

- A. Architecture evaluation
- B. Baseline reporting
- C. Whitebox testing
- D. Peer review

Correct Answer: D

Section: (none)

Explanation

QUESTION 202

An attacker wearing a building maintenance uniform approached a company's receptionist asking for access to a secure area. The receptionist asks for identification, a building access badge and checks the company's list approved maintenance personnel prior to granting physical access to the secure area.

The controls used by the receptionist are in place to prevent which of the following types of attacks?

- A. Tailgating
- B. Shoulder surfing
- C. Impersonation
- D. Hoax

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 203

A security administrator is tasked with conducting an assessment made to establish the baseline security posture of the corporate IT infrastructure. The assessment must report actual flaws and weaknesses in the infrastructure. Due to the expense of hiring outside consultants, the testing must be performed using in-house or cheaply available resource. There cannot be a possibility of any requirement being damaged in the test.

Which of the following has the administrator been tasked to perform?

- A. Risk transference
- B. Penetration test
- C. Threat assessment
- D. Vulnerability assessment

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 204

A network administrator is attempting to troubleshoot an issue regarding certificates on a secure website. During the troubleshooting process, the network administrator notices that the web gateway proxy on the local network has signed all of the certificates on the local machine.

Which of the following describes the type of attack the proxy has been legitimately programmed to perform?

- A. Transitive access
- B. Spoofing
- C. Man-in-the-middle
- D. Replay

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 205

Which of the following use the SSH protocol?

- A. Stelnet
- B. SCP
- C. SNMP
- D. FTPS
- E. SSL
- F. SFTP

Correct Answer: BF

Section: (none)

Explanation

Explanation/Reference:

QUESTION 206

Which of the following is the GREATEST risk to a company by allowing employees to physically bring their personal smartphones to work?

- A. Taking pictures of proprietary information and equipment in restricted areas.
- B. Installing soft token software to connect to the company's wireless network.
- C. Company cannot automate patch management on personally-owned devices.
- D. Increases the attack surface by having more target devices on the company's campus

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 207

Which of the following is the summary of loss for a given year?

- A. MTBF
- B. ALE
- C. SLA
- D. ARO

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 208

A Security Officer on a military base needs to encrypt several smart phones that will be going into the field.

Which of the following encryption solutions should be deployed in this situation?

- A. Elliptic curve
- B. One-time pad
- C. 3DES
- D. AES-256

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 209

An organization relies heavily on an application that has a high frequency of security updates. At present, the security team only updates the application on the first Monday of each month, even though the security updates are released as often as twice a week.

Which of the following would be the BEST method of updating this application?

- A. Configure testing and automate patch management for the application.
- B. Configure security control testing for the application.
- C. Manually apply updates for the application when they are released.
- D. Configure a sandbox for testing patches before the scheduled monthly update.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 210

A technician must configure a firewall to block external DNS traffic from entering a network.

Which of the following ports should they block on the firewall?

- A. 53
- B. 110
- C. 143
- D. 443

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 211

A software development company needs to share information between two remote servers, using encryption to protect it. A programmer suggests developing a new encryption protocol, arguing that using an unknown protocol with secure, existing cryptographic algorithm libraries will provide strong encryption without being susceptible to attacks on other known protocols.

Which of the following summarizes the BEST response to the programmer's proposal?

- A. The newly developed protocol will only be as secure as the underlying cryptographic algorithms used.
- B. New protocols often introduce unexpected vulnerabilities, even when developed with otherwise secure and tested algorithm libraries.
- C. A programmer should have specialized training in protocol development before attempting to design a new encryption protocol.
- D. The obscurity value of unproven protocols against attacks often outweighs the potential for introducing new vulnerabilities.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 212

A security technician would like to obscure sensitive data within a file so that it can be transferred without causing suspicion.

Which of the following technologies would BEST be suited to accomplish this?

- A. Transport Encryption
- B. Stream Encryption
- C. Digital Signature
- D. Steganography

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Steganography is the process of hiding a message in another message so as to obfuscate its importance. It is also the process of hiding a message in a medium such as a digital image, audio file, or other file. In theory, doing this prevents analysts from detecting the real message. You could encode your message in another file or message and use that file to hide your message.

QUESTION 213

A supervisor in your organization was demoted on Friday afternoon. The supervisor had the ability to modify the contents of a confidential database, as well as other managerial permissions. On Monday morning, the database administrator reported that log files indicated that several records were missing from the database.

Which of the following risk mitigation strategies should have been implemented when the supervisor was demoted?

- A. Incident management
- B. Routine auditing
- C. IT governance

D. Monthly user rights reviews

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 214

Which of the following attack types is being carried out where a target is being sent unsolicited messages via Bluetooth?

- A. War chalking
- B. Bluejacking
- C. Bluesnarfing
- D. Rogue tethering

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Bluejacking is the sending of unsolicited messages over Bluetooth to Bluetooth-enabled devices such as mobile phones, PDAs or laptop computers, sending a vCard which typically contains a message in the name field (i.e., for bluedating or bluechat) to another Bluetooth-enabled device via the OBEX protocol.

QUESTION 215

Joe is exchanging encrypted email with another party. Joe encrypts the initial email with a key. When Joe receives a response, he is unable to decrypt the response with the same key he used initially.

Which of the following would explain the situation?

- A. An ephemeral key was used for one of the messages
- B. A stream cipher was used for the initial email; a block cipher was used for the reply
- C. Out-of-band key exchange has taken place
- D. Asymmetric encryption is being used

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Asymmetric algorithms use two keys to encrypt and decrypt data. These asymmetric keys are referred to as the public key and the private key. The sender uses the public key to encrypt a message, and the receiver uses the private key to decrypt the message; what one key does, the other one undoes.

QUESTION 216

Recently several employees were victims of a phishing email that appeared to originate from the company president. The email claimed the employees would be disciplined if they did not click on a malicious link in the message.

Which of the following principles of social engineering made this attack successful?

- A. Authority
- B. Spamming
- C. Social proof
- D. Scarcity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 217

Which of the following is the LEAST secure hashing algorithm?

- A. SHA1
- B. RIPEMD
- C. MD5
- D. DES

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 218

An employee uses RDP to connect back to the office network.

If RDP is misconfigured, which of the following security exposures would this lead to?

- A. A virus on the administrator's desktop would be able to sniff the administrator's username and password.
- B. Result in an attacker being able to phish the employee's username and password.
- C. A social engineering attack could occur, resulting in the employee's password being extracted.
- D. A man in the middle attack could occur, resulting the employee's username and password being captured.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 219

Joe, the security administrator, sees this in a vulnerability scan report:

"The server 10.1.2.232 is running Apache 2.2.20 which may be vulnerable to a mod_cgi exploit."

Joe verifies that the mod_cgi module is not enabled on 10.1.2.232. This message is an example of:

- A. a threat.
- B. a risk.

- C. a false negative.
- D. a false positive.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 220

An auditor has identified an access control system that can incorrectly accept an access attempt from an unauthorized user. Which of the following authentication systems has the auditor reviewed?

- A. Password-based
- B. Biometric-based
- C. Location-based
- D. Certificate-based

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 221

DRAG DROP

Drag and drop the correct protocol to its default port.

Select and Place:

| | | |
|--------|----------------------|-----|
| FTP | <input type="text"/> | 161 |
| Telnet | <input type="text"/> | 22 |
| SMTP | <input type="text"/> | 21 |
| SNMP | <input type="text"/> | 69 |
| SCP | <input type="text"/> | 25 |
| TFTP | <input type="text"/> | 23 |

Correct Answer:

| | | |
|--------|-----|--|
| FTP | 21 | |
| Telnet | 23 | |
| SMTP | 25 | |
| SNMP | 161 | |
| SCP | 22 | |
| TFTP | 69 | |

Section: (none)

Explanation

Explanation/Reference:

Explanation:

FTP uses TCP port 21. Telnet uses port 23.

SSH uses TCP port 22.

All protocols encrypted by SSH, including SFTP, SHTTP, SCP, SExec, and slogin, also use TCP port 22.

Secure Copy Protocol (SCP) is a secure file-transfer facility based on SSH and Remote Copy Protocol (RCP).

Secure FTP (SFTP) is a secured alternative to standard File Transfer Protocol (FTP). SMTP uses TCP port 25.

Port 69 is used by TFTP.

SNMP makes use of UDP ports 161 and 162.

http://en.wikipedia.org/wiki/List_of_TCP_and_UDP_port_numbers

QUESTION 222

The Chief Technology Officer (CTO) of a company, Ann, is putting together a hardware budget for the next 10

years. She is asking for the average lifespan of each hardware device so that she is able to calculate when she will have to replace each device.

Which of the following categories BEST describes what she is looking for?

- A. ALE
- B. MTTR
- C. MTBF
- D. MTTF

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 223

A software developer wants to ensure that the application is verifying that a key is valid before establishing SSL connections with random remote hosts on the Internet.

Which of the following should be used in the code? (Select TWO.)

- A. Escrowed keys
- B. SSL symmetric encryption key
- C. Software code private key
- D. Remote server public key
- E. OCSP

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 224

A security guard has informed the Chief Information Security Officer that a person with a tablet has been walking around the building. The guard also noticed strange white markings in different areas of the parking lot.

The person is attempting which of the following types of attacks?

- A. Jamming
- B. War chalking
- C. Packet sniffing
- D. Near field communication

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 225

A system administrator is configuring a site-to-site VPN tunnel.

Which of the following should be configured on the VPN concentrator during the IKE phase?

- A. RIPEMD
- B. ECDHE
- C. Diffie-Hellman
- D. HTTPS

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 226

A network operations manager has added a second row of server racks in the datacenter. These racks face the opposite direction of the first row of racks.

Which of the following is the reason the manager installed the racks this way?

- A. To lower energy consumption by sharing power outlets
- B. To create environmental hot and cold isles
- C. To eliminate the potential for electromagnetic interference
- D. To maximize fire suppression capabilities

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 227

Phishing emails frequently take advantage of high-profile catastrophes reported in the news.

Which of the following principles BEST describes the weakness being exploited?

- A. Intimidation
- B. Scarcity
- C. Authority
- D. Social proof

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 228

New magnetic locks were ordered for an entire building. In accordance with company policy, employee safety is the top priority.

In case of a fire where electricity is cut, which of the following should be taken into consideration when installing the new locks?

- A. Fail safe
- B. Fault tolerance
- C. Fail secure
- D. Redundancy

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 229

Anne, the Chief Executive Officer (CEO), has reported that she is getting multiple telephone calls from someone claiming to be from the helpdesk. The caller is asking to verify her network authentication credentials because her computer is broadcasting across the network.

This is MOST likely which of the following types of attacks?

- A. Vishing
- B. Impersonation
- C. Spim
- D. Scareware

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 230

An administrator discovers the following log entry on a server:

```
Nov 12 2013 00:23:45 httpd[2342]: GET  
/app2/prod/proc/process.php?input=change;cd%20../../../../etc;cat%20shadow
```

Which of the following attacks is being attempted?

- A. Command injection
- B. Password attack
- C. Buffer overflow
- D. Cross-site scripting

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 231

A security team wants to establish an Incident Response plan. The team has never experienced an incident.

Which of the following would BEST help them establish plans and procedures?

- A. Table top exercises
- B. Lessons learned
- C. Escalation procedures
- D. Recovery procedures

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 232

Which of the following would verify that a threat does exist and security controls can easily be bypassed without actively testing an application?

- A. Protocol analyzer
- B. Vulnerability scan
- C. Penetration test
- D. Port scanner

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

A vulnerability scan is the automated process of proactively identifying security vulnerabilities of computing systems in a network in order to determine if and where a system can be exploited and/or threatened. While public servers are important for communication and data transfer over the Internet, they open the door to potential security breaches by threat agents, such as malicious hackers.

Vulnerability scanning employs software that seeks out security flaws based on a database of known flaws, testing systems for the occurrence of these flaws and generating a report of the findings that an individual or an enterprise can use to tighten the network's security.

Vulnerability scanning typically refers to the scanning of systems that are connected to the Internet but can also refer to system audits on internal networks that are not connected to the Internet in order to assess the threat of rogue software or malicious employees in an enterprise.

QUESTION 233

Which of the following technologies would be MOST appropriate to utilize when testing a new software patch before a company-wide deployment?

- A. Cloud computing
- B. Virtualization
- C. Redundancy
- D. Application control

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Virtualization is used to host one or more operating systems in the memory of a single host computer and allows multiple operating systems to run simultaneously on the same hardware, reducing costs. Virtualization offers the flexibility of quickly and easily making backups of entire virtual systems, and quickly recovering the virtual system when errors occur. Furthermore, malicious code compromises of virtual systems rarely affect the host system, which allows for safer testing and experimentation.

QUESTION 234

A system administrator needs to implement 802.1x whereby when a user logs into the network, the authentication server communicates to the network switch and assigns the user to the proper VLAN.

Which of the following protocols should be used?

- A. RADIUS
- B. Kerberos
- C. LDAP
- D. MSCHAP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 235

A security administrator receives notice that a third-party certificate authority has been compromised, and new certificates will need to be issued.

Which of the following should the administrator submit to receive a new certificate?

- A. CRL
- B. OSCP
- C. PFX
- D. CSR
- E. CA

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 236

DRAG DROP

A forensic analyst is asked to respond to an ongoing network attack on a server. Place the items in the list below in the correct order in which the forensic analyst should preserve them.

Select and Place:

| | |
|---|--|
| 1 | |
| 2 | |
| 3 | |
| 4 | |

RAM

CPU cache

Swap

Hard drive

Correct Answer:

| | |
|---|------------|
| 1 | CPU cache |
| 2 | RAM |
| 3 | Swap |
| 4 | Hard drive |

| |
|--|
| |
|--|

| |
|--|
| |
|--|

| |
|--|
| |
|--|

| |
|--|
| |
|--|

Section: (none)
Explanation

Explanation/Reference:
Explanation:

When dealing with multiple issues, address them in order of volatility (OOV); always deal with the most volatile first. Volatility can be thought of as the amount of time that you have to collect certain data before a window of opportunity is gone. Naturally, in an investigation you want to collect everything, but some data will exist longer than others, and you cannot possibly collect all of it once. As an example, the OOV in an investigation may be RAM, hard drive data, CDs/DVDs, and printouts. Order of volatility: Capture system images as a snapshot of what exists, look at network traffic and logs, capture any relevant video/screenshots/hashes, record time offset on the systems, talk to witnesses, and track total man-hours and expenses associated with the investigation.

QUESTION 237

A company wants to host a publicly available server that performs the following functions:

Evaluates MX record lookup
Can perform authenticated requests for A and AAA records
Uses RRSIG

Which of the following should the company use to fulfill the above requirements?

- A. DNSSEC
- B. SFTP
- C. nslookup
- D. dig
- E. LDAPS

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

DNS Security Extensions (DNSSEC) provides, among other things, cryptographic authenticity of responses using Resource Record Signatures (RRSIG) and authenticated denial of existence using Next-Secure (NSEC) and Hashed-NSEC records (NSEC3).

QUESTION 238

A security administrator is developing training for corporate users on basic security principles for personal email accounts.

Which of the following should be mentioned as the MOST secure way for password recovery?

- A. Utilizing a single Q for password recovery
- B. Sending a PIN to a smartphone through text message
- C. Utilizing CAPTCHA to avoid brute force attacks
- D. Use a different e-mail address to recover password

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 239

A company researched the root cause of a recent vulnerability in its software. It was determined that the vulnerability was the result of two updates made in the last release. Each update alone would not have

resulted in the vulnerability.

In order to prevent similar situations in the future, the company should improve which of the following?

- A. Change management procedures
- B. Job rotation policies
- C. Incident response management
- D. Least privilege access controls

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 240

A computer on a company network was infected with a zero-day exploit after an employee accidentally opened an email that contained malicious content. The employee recognized the email as malicious and was attempting to delete it, but accidentally opened it.

Which of the following should be done to prevent this scenario from occurring again in the future?

- A. Install host-based firewalls on all computers that have an email client installed
- B. Set the email program default to open messages in plain text
- C. Install end-point protection on all computers that access web email
- D. Create new email spam filters to delete all messages from that sender

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 241

A company wants to ensure that the validity of publicly trusted certificates used by its web server can be determined even during an extended internet outage.

Which of the following should be implemented?

- A. Recovery agent
- B. Ocsp
- C. Crl
- D. Key escrow

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 242

An administrator intends to configure an IPSec solution that provides ESP with integrity protection, but not

confidentiality protection.

Which of the following AES modes of operation would meet this integrity-only requirement?

- A. HMAC
- B. PCBC
- C. CBC
- D. GCM
- E. CFB

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 243

The chief security officer (CSO) has issued a new policy that requires that all internal websites be configured for HTTPS traffic only. The network administrator has been tasked to update all internal sites without incurring additional costs.

Which of the following is the best solution for the network administrator to secure each internal website?

- A. Use certificates signed by the company CA
- B. Use a signing certificate as a wild card certificate
- C. Use certificates signed by a public ca
- D. Use a self-signed certificate on each internal server

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

This is a way to update all internal sites without incurring additional costs?

To be a CA (Certificate Authority), you need an infrastructure that consists of considerable operational elements, hardware, software, policy frameworks and practice statements, auditing, security infrastructure and personnel.

QUESTION 244

A security program manager wants to actively test the security posture of a system. The system is not yet in production and has no uptime requirement or active user base.

Which of the following methods will produce a report which shows vulnerabilities that were actually exploited?

- A. Peer review
- B. Component testing
- C. Penetration testing
- D. Vulnerability testing

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

A penetration test, or pen test, is an attempt to evaluate the security of an IT infrastructure by safely trying to exploit vulnerabilities.

QUESTION 245

A new intern in the purchasing department requires read access to shared documents. Permissions are normally controlled through a group called "Purchasing", however, the purchasing group permissions allow write access.

Which of the following would be the BEST course of action?

- A. Modify all the shared files with read only permissions for the intern.
- B. Create a new group that has only read permissions for the files.
- C. Remove all permissions for the shared files.
- D. Add the intern to the "Purchasing" group.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 246

A business has recently deployed laptops to all sales employees. The laptops will be used primarily from home offices and while traveling, and a high amount of wireless mobile use is expected.

To protect the laptops while connected to untrusted wireless networks, which of the following would be the BEST method for reducing the risk of having the laptops compromised?

- A. MAC filtering
- B. Virtualization
- C. OS hardening
- D. Application white-listing

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 247

DRAG DROP

Task: Determine the types of attacks below by selecting an option from the dropdown list.

Select and Place:

| | | | |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|--------------------|
|  | Email sent to multiple users to a link to verify username/password on external site |  | Choose Attack Type |
|  | Phone calls made to CEO of organization asking for various financial data |  | Choose Attack Type |
|  | Phone call is made to individual stating there was an IT issue, and asked for the user's password over the phone |  | Choose Attack Type |
|  | You're on a social media site and an instant message pops up from a friend with a link to a new breakthrough diet |  | Choose Attack Type |
|  | A friend/colleague asks you questions of a personal nature, which could be considered typical password reset questions. |  | Choose Attack Type |

- Phishing
- Pharming
- Vishing
- Whaling
- X-Mas
- Spoofing
- Hoax
- Spam
- Spim
- Social Engineering

Correct Answer:

| | | | |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|--------------------|
|  | Email sent to multiple users to a link to verify username/password on external site |  | Phishing |
|  | Phone calls made to CEO of organization asking for various financial data |  | Whaling |
|  | Phone call is made to individual stating there was an IT issue, and asked for the user's password over the phone |  | Vishing |
|  | You're on a social media site and an instant message pops up from a friend with a link to a new breakthrough diet |  | Spim |
|  | A friend/colleague asks you questions of a personal nature, which could be considered typical password reset questions. |  | Social Engineering |

Section: (none)

Explanation

Explanation/Reference:

Explanation:

A: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft. Phishing email will direct the user to visit a website where they are asked to update personal information, such as a password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page.

B: Whaling is a specific kind of malicious hacking within the more general category of phishing, which involves hunting for data that can be used by the hacker. In general, phishing efforts are focused on collecting personal data about users. In whaling, the targets are high-ranking bankers, executives or others in powerful positions or job titles. Hackers who engage in whaling often describe these efforts as "reeling in a big fish," applying a familiar metaphor to the process of scouring technologies for loopholes and opportunities for data theft. Those who are engaged in whaling may, for example, hack into specific networks where these powerful individuals work or store sensitive data. They may also set up keylogging or other malware on a work station associated with one of these executives. There are many ways that hackers can pursue whaling, leading C-level or top-level executives in business and government to stay vigilant about the possibility of cyber threats.

C: Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit.

D: SPIM is a term sometimes used to refer to spam over IM (Instant Messaging). It's also called just spam, instant spam, or IM marketing. No matter what the name, it consists of unwanted messages transmitted

through some form of instant messaging service, which can include Short Message Service (SMS)

E: Social engineering is a non-technical method of intrusion hackers use that relies heavily on human interaction and often involves tricking people into breaking normal security procedures. It is one of the greatest threats that organizations today encounter. A social engineer runs what used to be called a "con game." For example, a person using social engineering to break into a computer network might try to gain the confidence of an authorized user and get them to reveal information that compromises the network's security. Social engineers often rely on the natural helpfulness of people as well as on their weaknesses. They might, for example, call the authorized employee with some kind of urgent problem that requires immediate network access. Appealing to vanity, appealing to authority, appealing to greed, and old-fashioned eavesdropping are other typical social engineering techniques.

QUESTION 248

SIMULATION

You have just received some room and WiFi access control recommendations from a security consulting company. Click on each building to bring up available security controls. Please implement the following requirements:

The Chief Executive Officer's (CEO) office had multiple redundant security measures installed on the door to the office. Remove unnecessary redundancies to deploy three-factor authentication, while retaining the expensive iris reader.

The Public Cafe has wireless available to customers. You need to secure the WAP with WPA and place a passphrase on the customer receipts.

In the Data Center you need to include authentication from the "something you know" category and take advantage of the existing smartcard reader on the door.

In the Help Desk Office, you need to require single factor authentication through the use of physical tokens given to guests by the receptionist.

The PII Office has redundant security measures in place. You need to eliminate the redundancy while maintaining three-factor authentication and retaining the more expensive controls.

Instructions: The original security controls for each office can be reset at any time by selecting the Reset button. Once you have met the above requirements for each office, select the Save button. When you have completed the entire simulation, please select the Done button to submit. Once the simulation is submitted, please select the Next button to continue.

QUESTION 249
SIMULATION

Task: Configure the firewall (fill out the table) to allow these four rules:

Only allow the Accounting computer to have HTTPS access to the Administrative server.

Only allow the HR computer to be able to communicate with the Server 2 System over SCP.

Allow the IT computer to have access to both the Administrative Server 1 and Administrative Server 2

| Source IP | Destination IP | Port Number | TCP/UDP | Allow/Deny |
|-----------|----------------|-------------|---------|------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Correct Answer: See the solution below.

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Use the following answer for this simulation task.

Below table has all the answers required for this question.

| Source IP | Destination IP | Port Number | TCP/UDP | Allow/Deny |
|----------------|----------------|-------------|---------|------------|
| 10.4.255.10/24 | 10.4.255.101 | 443 | TCP | Allow |
| 10.4.255.10/23 | 10.4.255.2 | 22 | TCP | Allow |
| 10.4.255.10/25 | 10.4.255.101 | Any | Any | Allow |
| 10.4.255.10/25 | 10.4.255.102 | Any | Any | Allow |

Firewall rules act like ACLs, and they are used to dictate what traffic can pass between the firewall and the

internal network. Three possible actions can be taken based on the rule's criteria:

Block the connection
Allow the connection
Allow the connection only if it is secured

TCP is responsible for providing a reliable, one-to-one, connection-oriented session. TCP establishes a connection and ensures that the other end receives any packets sent.

Two hosts communicate packet results with each other. TCP also ensures that packets are decoded and sequenced properly. This connection is persistent during the session.

When the session ends, the connection is torn down.

UDP provides an unreliable connectionless communication method between hosts. UDP is considered a best-effort protocol, but it's considerably faster than TCP.

The sessions don't establish a synchronized session like the kind used in TCP, and UDP doesn't guarantee error-free communications.

The primary purpose of UDP is to send small packets of information.

The application is responsible for acknowledging the correct reception of the data. Port 22 is used by both SSH and SCP with UDP.

Port 443 is used for secure web connections? HTTPS and is a TCP port.

Thus to make sure only the Accounting computer has HTTPS access to the Administrative server you should use TCP port 443 and set the rule to allow communication between 10.4.255.10/24 (Accounting) and 10.4.255.101 (Administrative server1) Thus to make sure that only the HR computer has access to Server2 over SCP you need use of TCP port 22 and set the rule to allow communication between 10.4.255.10/23 (HR) and 10.4.255.2 (server2)

Thus to make sure that the IT computer can access both the Administrative servers you need to use a port and accompanying port number and set the rule to allow communication between: 10.4.255.10.25 (IT computer) and 10.4.255.101 (Administrative server1)

10.4.255.10.25 (IT computer) and 10.4.255.102 (Administrative server2)

QUESTION 250

HOTSPOT

For each of the given items, select the appropriate authentication category from the dropdown choices.
Instructions: When you have completed the simulation, please select the Done button to submit.

Hot Area:

Authentication Category

Instructions: When you have completed the simulation, Please Select the Done Button to Submit

Select the appropriate authentication type for the following items:

| Item | Response |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Retina scan | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Smart card | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Hardware Token | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Password | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| PIN number | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Fingerprint scan | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |

Correct Answer:

Authentication Category

Instructions: When you have completed the simulation, Please Select the Done Button to Submit

Select the appropriate authentication type for the following items:

| Item | Response |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Retina scan | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Smart card | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Hardware Token | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Password | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| PIN number | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |
| Fingerprint scan | <div><div></div><div>Something you have</div><div>Something you know</div><div>Something you are</div><div>All given authentication categories</div></div> |

Section: (none)

Explanation

Explanation/Reference:

Answer:

Something you are includes fingerprints, retina scans, or voice recognition.

Something you have includes smart cards, token devices, or keys.

Something you know includes a password, codes, PINs, combinations, or secret phrases. Somewhere you are including a physical location s or logical addresses, such as domain name, an IP address, or a MAC address.

Something you do includes your typing rhythm, a secret handshake, or a private knock http://en.wikipedia.org/wiki/Password_authentication_protocol#Working_cycle http://en.wikipedia.org/wiki/Smart_card#Security

QUESTION 251

During a data breach cleanup, it is discovered that not all of the sites involved have the necessary data wiping tools. The necessary tools are quickly distributed to the required technicians, but when should this problem BEST be revisited?

- A. Reporting
- B. Preparation
- C. Mitigation
- D. Lessons Learned

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 252

HOTSPOT

For each of the given items, select the appropriate authentication category from the drop down choices.
Select the appropriate authentication type for the following items:

Hot Area:

| Item | Response |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fingerprint scan | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |
| Hardware token | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |
| Smart card | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |
| Password | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |
| PIN number | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |
| Retina Scan | <div> <div></div> <div> Biometric authentication </div> </div> |

Correct Answer:

| Item | Response |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fingerprint scan | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |
| Hardware token | <div> <div></div> <div> Biometric authentication One Time Password Multi-factor PAP authentication PAP authentication Biometric authentication </div> </div> |

Explanation

Explanation/Reference:

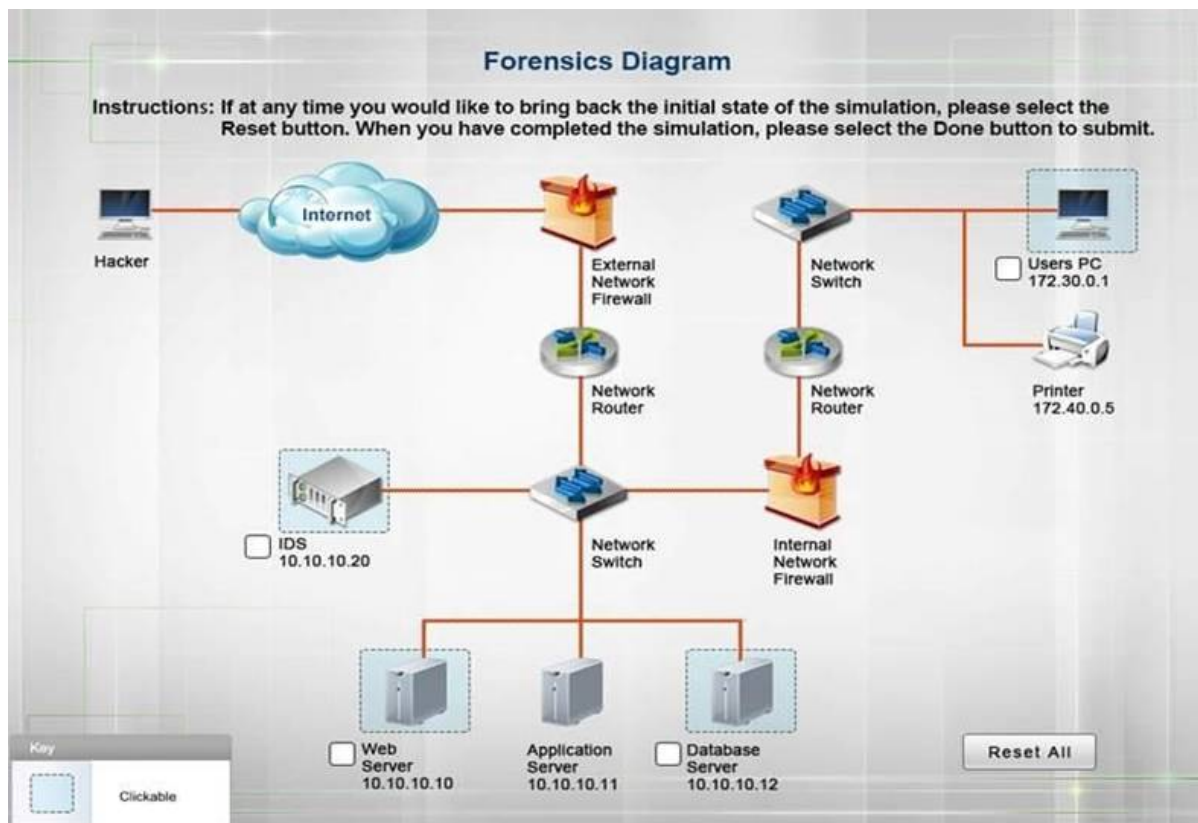

QUESTION 253

SIMULATION

A security administrator discovers that an attack has been completed against a node on the corporate network. All available logs were collected and stored.

You must review all network logs to discover the scope of the attack, check the box of the node(s) that have been compromised and drag and drop the appropriate actions to complete the incident response on the network. The environment is a critical production environment; perform the LEAST disruptive actions on the network, while still performing the appropriate incid3nt responses.

Instructions: The web server, database server, IDS, and User PC are clickable. Check the box of the node(s) that have been compromised and drag and drop the appropriate actions to complete the incident response on the network. Not all actions may be used, and order is not important. If at any time you would like to bring back the initial state of the simulation, please select the Reset button. When you have completed the simulation, please select the Done button to submit. Once the simulation is submitted, please select the Next button to continue.

Correct Answer: See the solution below.

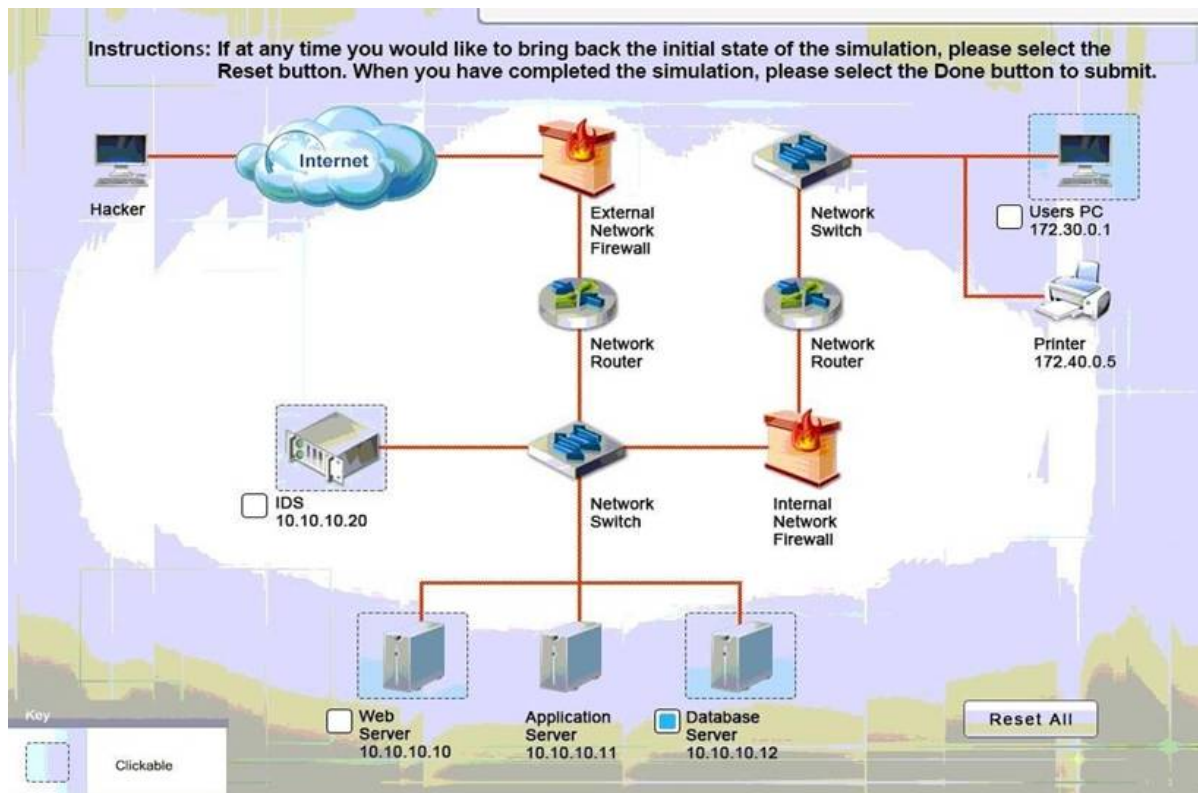

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Database server was attacked, actions should be to capture network traffic and Chain of Custody.

Logs

Actions

Possible Actions:

Capture Network Traffic

Chain Of Custody

Format

Hash

Image

Record Time Offset

System Restore

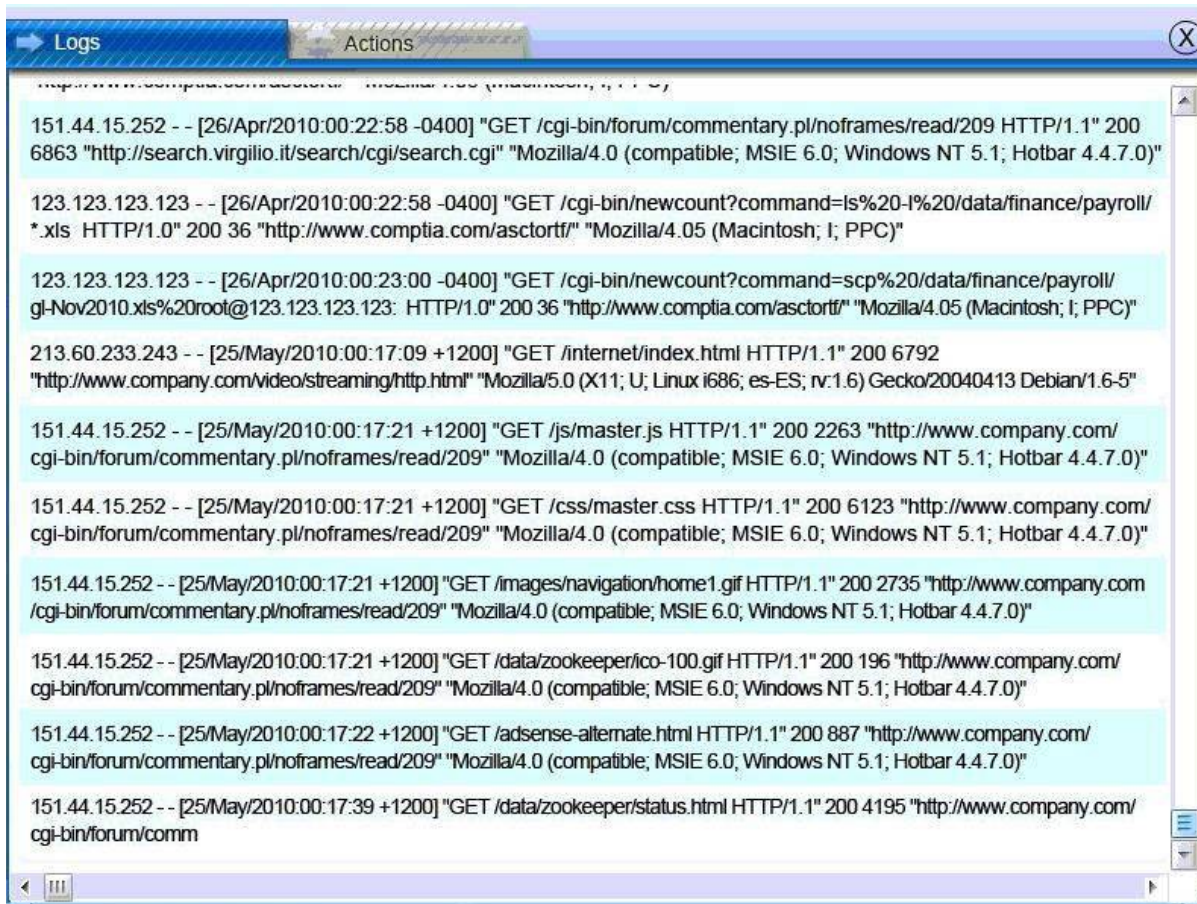

Actions Performed:

Capture Network Traffic

Chain Of Custody

IDS Server Log:

| Logs | Actions |

QUESTION 254

Joe, a technician, is working remotely with his company provided laptop at the coffee shop near his home. Joe is concerned that another patron of the coffee shop may be trying to access his laptop.

Which of the following is an appropriate control to use to prevent the other patron from accessing Joe's laptop directly?

- A. full-disk encryption
- B. Host-based firewall
- C. Current antivirus definitions
- D. Latest OS updates

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 255

An attacker uses a network sniffer to capture the packets of a transaction that adds \$20 to a gift card. The attacker then user a function of the sniffer to push those packets back onto the network again, adding another \$20 to the gift card. This can be done many times.

Which of the following describes this type of attack?

- A. Integer overflow attack
- B. Smurf attack
- C. Replay attack
- D. Buffer overflow attack
- E. Cross-site scripting attack

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 256

An organization is moving its human resources system to a cloud services provider. The company plans to continue using internal usernames and passwords with the service provider, but the security manager does not want the service provider to have a company of the passwords.

Which of the following options meets all of these requirements?

- A. Two-factor authentication
- B. Account and password synchronization
- C. Smartcards with PINS
- D. Federated authentication

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 257

The data backup window has expanded into the morning hours and has begun to affect production users. The main bottleneck in the process is the time it takes to replicate the backups to separate servers at the offsite data center.

Which of the following uses of deduplication could be implemented to reduce the backup window?

- A. Implement deduplication at the network level between the two locations
- B. Implement deduplication on the storage array to reduce the amount of drive space needed
- C. Implement deduplication on the server storage to reduce the data backed up
- D. Implement deduplication on both the local and remote servers

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 258

A penetration testing is preparing for a client engagement in which the tester must provide data that proves and validates the scanning tools' results.

Which of the following is the best method for collecting this information?

- A. Set up the scanning system's firewall to permit and log all outbound connections
- B. Use a protocol analyzer to log all pertinent network traffic
- C. Configure network flow data logging on all scanning system
- D. Enable debug level logging on the scanning system and all scanning tools used.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 259

Which of the following best describes the initial processing phase used in mobile device forensics?

- A. The phone should be powered down and the battery removed to preserve the state of data on any internal or removable storage utilized by the mobile device
- B. The removable data storage cards should be processed first to prevent data alteration when examining the mobile device
- C. The mobile device should be examined first, then removable storage and lastly the phone without removable storage should be examined again
- D. The phone and storage cards should be examined as a complete unit after examining the removable storage cards separately.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 260

Ann a security analyst is monitoring the IDS console and noticed multiple connections from an internal host to a suspicious call back domain.

Which of the following tools would aid her to decipher the network traffic?

- A. Vulnerability Scanner
- B. NMAP
- C. NETSTAT
- D. Packet Analyzer

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 261

An administrator is testing the collision resistance of different hashing algorithms.

Which of the following is the strongest collision resistance test?

- A. Find two identical messages with different hashes
- B. Find two identical messages with the same hash
- C. Find a common has between two specific messages
- D. Find a common hash between a specific message and a random message

Correct Answer: A

Section: (none)

QUESTION 262

The SSID broadcast for a wireless router has been disabled but a network administrator notices that unauthorized users are accessing the wireless network. The administer has determined that attackers are still able to detect the presence of the wireless network despite the fact the SSID has been disabled.

Which of the following would further obscure the presence of the wireless network?

- A. Upgrade the encryption to WPA or WPA2
- B. Create a non-zero length SSID for the wireless router
- C. Reroute wireless users to a honeypot
- D. Disable responses to a broadcast probe request

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 263

Which of the following should be used to implement voice encryption?

- A. SSLv3
- B. VDSL
- C. SRTP
- D. VoIP

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 264

During an application design, the development team specifies a LDAP module for single sign-on communication with the company's access control database.

This is an example of which of the following?

- A. Application control
- B. Data in-transit
- C. Identification
- D. Authentication

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 265

After a merger, it was determined that several individuals could perform the tasks of a network administrator in the merged organization. Which of the following should have been performed to ensure that employees have proper access?

- A. Time-of-day restrictions
- B. Change management
- C. Periodic auditing of user credentials
- D. User rights and permission review

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 266

A company exchanges information with a business partner. An annual audit of the business partner is

conducted against the SLA in order to verify:

- A. Performance and service delivery metrics
- B. Backups are being performed and tested
- C. Data ownership is being maintained and audited
- D. Risk awareness is being adhered to and enforced

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 267

Which of the following is the proper way to quantify the total monetary damage resulting from an exploited vulnerability?

- A. Calculate the ALE
- B. Calculate the ARO
- C. Calculate the MTBF
- D. Calculate the TCO

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 268

A security administrator needs to implement a system that detects possible intrusions based upon a vendor provided list.

Which of the following BEST describes this type of IDS?

- A. Signature based
- B. Heuristic
- C. Anomaly-based
- D. Behavior-based

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 269

The chief Security Officer (CSO) has reported a rise in data loss but no break ins have occurred.

By doing which of the following is the CSO most likely to reduce the number of incidents?

- A. Implement protected distribution

- B. Empty additional firewalls
- C. Conduct security awareness training
- D. Install perimeter barricades

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 270

Having adequate lighting on the outside of a building is an example of which of the following security controls?

- A. Deterrent
- B. Compensating
- C. Detective
- D. Preventative

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 271

During a recent audit, it was discovered that several user accounts belonging to former employees were still active and had valid VPN permissions.

Which of the following would help reduce the amount of risk the organization incurs in this situation in the future?

- A. Time-of-day restrictions
- B. User access reviews
- C. Group-based privileges
- D. Change management policies

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 272

An organization is working with a cloud services provider to transition critical business applications to a hybrid cloud environment. The organization retains sensitive customer data and wants to ensure the provider has sufficient administrative and logical controls in place to protect its data.

In which of the following documents would this concern MOST likely be addressed?

- A. Service level agreement
- B. Interconnection security agreement

- C. Non-disclosure agreement
- D. Business process analysis

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 273

A security administrator wants to implement a company-wide policy to empower data owners to manage and enforce access control rules on various resources.

Which of the following should be implemented?

- A. Mandatory access control
- B. Discretionary access control
- C. Role based access control
- D. Rule-based access control

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 274

Which of the following BEST describes an attack where communications between two parties are intercepted and forwarded to each party with neither party being aware of the interception and potential modification to the communications?

- A. Spear phishing
- B. Man-in-the-middle
- C. URL hijacking
- D. Transitive access

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 275

A security administrator wishes to implement a secure method of file transfer when communicating with outside organizations.

Which of the following protocols would BEST facilitate secure file transfers? (Select TWO)

- A. SCP
- B. TFTP
- C. SNMP

- D. FTP
- E. SMTP
- F. FTPS

Correct Answer: AF

Section: (none)

Explanation

Explanation/Reference:

QUESTION 276

A technician needs to implement a system which will properly authenticate users by their username and password only when the users are logging in from a computer in the office building. Any attempt to authenticate from a location other than the office building should be rejected.

Which of the following **MUST** the technician implement?

- A. Dual factor authentication
- B. Transitive authentication
- C. Single factor authentication
- D. Biometric authentication

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 277

After correctly configuring a new wireless enabled thermostat to control the temperature of the company's meeting room, Joe, a network administrator determines that the thermostat is not connecting to the internet-based control system. Joe verifies that the thermostat received the expected network parameters and it is associated with the AP. Additionally, the other wireless mobile devices connected to the same wireless network are functioning properly. The network administrator verified that the thermostat works when tested at his residence.

Which of the following is the **MOST** likely reason the thermostat is not connecting to the internet?

- A. The company implements a captive portal
- B. The thermostat is using the incorrect encryption algorithm
- C. the WPA2 shared key is incorrect
- D. The company's DHCP server scope is full

Correct Answer: A

QUESTION 280

A company is planning to encrypt the files in several sensitive directories of a file server with a symmetric key. Which of the following could be used?

- A. RSA
- B. TwoFish
- C. Diffie-Helman
- D. NTLMv2
- E. RIPEMD

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 281

Which of the following is a document that contains detailed information about actions that include how something will be done, when the actions will be performed, and penalties for failure?

- A. MOU

- B. ISA
- C. BPA
- D. SLA

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 282

Which of the following are MOST susceptible to birthday attacks?

- A. Hashed passwords
- B. Digital certificates
- C. Encryption passwords
- D. One time passwords

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 283

Joe a computer forensic technician responds to an active compromise of a database server. Joe first collects information in memory, then collects network traffic and finally conducts an image of the hard drive.

Which of the following procedures did Joe follow?

- A. Order of volatility
- B. Chain of custody
- C. Recovery procedure
- D. Incident isolation

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 284

A system administrator wants to implement an internal communication system that will allow employees to send encrypted messages to each other. The system must also support non- repudiation. Which of the following implements all these requirements?

- A. Bcrypt
- B. Blowfish
- C. PGP
- D. SHA

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 285

Given the log output:

```
Max 15 00:15:23.431 CRT: #SEC_LOGIN-5-LOGIN_SUCCESS:  
Login Success [user: msmith] [Source: 10.0.12.45]  
[localport: 23] at 00:15:23:431 CET Sun Mar 15 2015
```

Which of the following should the network administrator do to protect data security?

- A. Configure port security for logons
- B. Disable telnet and enable SSH
- C. Configure an AAA server
- D. Disable password and enable RSA authentication

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 286

The firewall administrator is adding a new certificate for the company's remote access solution. The solution requires that the uploaded file contain the entire certificate chain for the certificate to load properly. The administrator loads the company certificate and the root CA certificate into the file. The file upload is rejected.

Which of the following is required to complete the certificate chain?

- A. Certificate revocation list
- B. Intermediate authority
- C. Recovery agent
- D. Root of trust

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 287

The Chief Executive Officer (CEO) of a major defense contracting company is traveling overseas for a conference. The CEO will be taking a laptop.

Which of the following should the security administrator implement to ensure confidentiality of the data if the laptop were to be stolen or lost during the trip?

- A. Remote wipe
- B. Full device encryption

- C. BIOS password
- D. GPS tracking

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 288

In an effort to reduce data storage requirements, some company devices to hash every file and eliminate duplicates. The data processing routines are time sensitive so the hashing algorithm is fast and supported on a wide range of systems.

Which of the following algorithms is BEST suited for this purpose?

- A. MD5
- B. SHA
- C. RIPEMD
- D. AES

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 289

A new security policy in an organization requires that all file transfers within the organization be completed using applications that provide secure transfer. Currently, the organization uses FTP and HTTP to transfer files.

Which of the following should the organization implement in order to be compliant with the new policy?

- A. Replace FTP with SFTP and replace HTTP with TLS
- B. Replace FTP with FTPS and replaces HTTP with TFTP
- C. Replace FTP with SFTP and replace HTTP with Telnet
- D. Replace FTP with FTPS and replaces HTTP with IPSec

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 290

A product manager is concerned about continuing operations at a facility located in a region undergoing significant political unrest. After consulting with senior management, a decision is made to suspend operations at the facility until the situation stabilizes.

Which of the following risk management strategies BEST describes management's response?

- A. Deterrence
- B. Mitigation
- C. Avoidance
- D. Acceptance

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 291

Joe notices there are several user accounts on the local network generating spam with embedded malicious code.

Which of the following technical control should Joe put in place to BEST reduce these incidents?

- A. Account lockout
- B. Group Based Privileges
- C. Least privilege
- D. Password complexity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 292

Two users need to securely share encrypted files via email. Company policy prohibits users from sharing credentials or exchanging encryption keys.

Which of the following can be implemented to enable users to share encrypted data while abiding by company policies?

- A. Key escrow
- B. Digital signatures
- C. PKI
- D. Hashing

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 293

An information system owner has supplied a new requirement to the development team that calls for increased non-repudiation within the application. After undergoing several audits, the owner determined that current levels of non-repudiation were insufficient.

Which of the following capabilities would be MOST appropriate to consider implementing in response to the

new requirement?

- A. Transitive trust
- B. Symmetric encryption
- C. Two-factor authentication
- D. Digital signatures
- E. One-time passwords

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 294

Joe a website administrator believes he owns the intellectual property for a company invention and has been replacing image files on the company's public facing website in the DMZ. Joe is using steganography to hide stolen data.

Which of the following controls can be implemented to mitigate this type of inside threat?

- A. Digital signatures
- B. File integrity monitoring
- C. Access controls
- D. Change management
- E. Stateful inspection firewall

Correct Answer: B

Section: (none)

Explanation

QUESTION 295

The process of applying a salt and cryptographic hash to a password then repeating the process many times is known as which of the following?

- A. Collision resistance
- B. Rainbow table
- C. Key stretching
- D. Brute force attack

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 296

Which of the following is commonly used for federated identity management across multiple organizations?

- A. SAML
- B. Active Directory
- C. Kerberos
- D. LDAP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 297

While performing surveillance activities, an attacker determines that an organization is using 802.1X to secure LAN access.

Which of the following attack mechanisms can the attacker utilize to bypass the identified network security?

- A. MAC spoofing
- B. Pharming
- C. Xmas attack
- D. ARP poisoning

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 298

A security administrator has been asked to implement a VPN that will support remote access over IPSEC.

Which of the following is an encryption algorithm that would meet this requirement?

- A. MD5
- B. AES
- C. UDP
- D. PKI

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 299

A security administrator is evaluating three different services: radius, diameter, and Kerberos.

Which of the following is a feature that is UNIQUE to Kerberos?

- A. It provides authentication services
- B. It uses tickets to identify authenticated users

- C. It provides single sign-on capability
- D. It uses XML for cross-platform interoperability

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 300

Which of the following can affect electrostatic discharge in a network operations center?

- A. Fire suppression
- B. Environmental monitoring
- C. Proximity card access
- D. Humidity controls

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 301

A malicious attacker has intercepted HTTP traffic and inserted an ASCII line that sets the referrer URL.

Which of the following is the attacker most likely utilizing?

- A. Header manipulation
- B. Cookie hijacking
- C. Cross-site scripting
- D. Xml injection

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 302

A company would like to prevent the use of a known set of applications from being used on company computers.

Which of the following should the security administrator implement?

- A. Whitelisting
- B. Anti-malware
- C. Application hardening
- D. Blacklisting
- E. Disable removable media

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 303

A new hire wants to use a personally owned phone to access company resources. The new hire expresses concern about what happens to the data on the phone when they leave the company.

Which of the following portions of the company's mobile device management configuration would allow the company data to be removed from the device without touching the new hire's data?

- A. Asset control
- B. Device access control
- C. Storage lock out
- D. Storage segmentation

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 304

A consultant has been tasked to assess a client's network. The client reports frequent network outages. Upon viewing the spanning tree configuration, the consultant notices that an old and low performing edge switch on the network has been elected to be the root bridge.

Which of the following explains this scenario?

- A. The switch also serves as the DHCP server
- B. The switch has the lowest MAC address
- C. The switch has spanning tree loop protection enabled
- D. The switch has the fastest uplink port

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 305

An organization is trying to decide which type of access control is most appropriate for the network. The current access control approach is too complex and requires significant overhead.

Management would like to simplify the access control and provide user with the ability to determine what permissions should be applied to files, document, and directories. The access control method that BEST satisfies these objectives is:

- A. Rule-based access control
- B. Role-based access control

- C. Mandatory access control
- D. Discretionary access control

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 306

While reviewing the security controls in place for a web-based application, a security controls assessor notices that there are no password strength requirements in place. Because of this vulnerability, passwords might be easily discovered using a brute force attack.

Which of the following password requirements will MOST effectively improve the security posture of the application against these attacks? (Select two)

- A. Minimum complexity
- B. Maximum age limit
- C. Maximum length
- D. Minimum length
- E. Minimum age limit
- F. Minimum re-use limit

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 307

A security administrator determined that users within the company are installing unapproved software. Company policy dictates that only certain applications may be installed or ran on the user's computers without exception.

Which of the following should the administrator do to prevent all unapproved software from running on the user's computer?

- A. Deploy antivirus software and configure it to detect and remove pirated software
- B. Configure the firewall to prevent the downloading of executable files
- C. Create an application whitelist and use OS controls to enforce it
- D. Prevent users from running as administrator so they cannot install software.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 308

A security administrator is tasked with implementing centralized management of all network devices. Network administrators will be required to logon to network devices using their LDAP credentials. All command

executed by network administrators on network devices must fall within a preset list of authorized commands and must be logged to a central facility.

Which of the following configuration commands should be implemented to enforce this requirement?

- A. LDAP server 10.55.199.3
- B. CN=company, CN=com, OU=netadmin, DC=192.32.10.233
- C. SYSLOG SERVER 172.16.23.50
- D. TACAS server 192.168.1.100

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 309

A website administrator has received an alert from an application designed to check the integrity of the company's website. The alert indicated that the hash value for a particular MPEG file has changed. Upon further investigation, the media appears to be the same as it was before the alert.

Which of the following methods has MOST likely been used?

- A. Cryptography
- B. Time of check/time of use
- C. Man in the middle
- D. Covert timing
- E. Steganography

Correct Answer: E

Section: (none)

Explanation

Explanation/Reference:

QUESTION 310

An attacker captures the encrypted communication between two parties for a week, but is unable to decrypt the messages. The attacker then compromises the session key during one exchange and successfully compromises a single message. The attacker plans to use this key to decrypt previously captured and future communications, but is unable to.

This is because the encryption scheme in use adheres to:

- A. Asymmetric encryption
- B. Out-of-band key exchange
- C. Perfect forward secrecy
- D. Secure key escrow

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 311

Many employees are receiving email messages similar to the one shown below:

From IT department
To employee
Subject email quota exceeded

Please click on the following link <http://www.website.info/email.php?quota=1Gb> and provide your username and password to increase your email quota. Upon reviewing other similar emails, the security administrator realized that all the phishing URLs have the following common elements; they all use HTTP, they all come from .info domains, and they all contain the same URL.

Which of the following should the security administrator configure on the corporate content filter to prevent users from accessing the phishing URL, while at the same time minimizing false positives?

- A. BLOCK http://www.*.info/
- B. DROP <http://www.website.info/email.php?>*
- C. Redirect http://www.*.info/email.php?quota=*TOhttp://company.com/corporate_policy.html
- D. DENY http://*.info/email.php?quota=1Gb

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 312

A security analyst is reviewing the following packet capture of an attack directed at a company's server located in the DMZ:

```
10:55:24.126586 IP 192.168.1.10.5000 > 172.31.67.4.21: Flags [S]  
10:55:24.126596 IP 192.168.1.10.5001 > 172.31.67.4.22: Flags [S]  
10:55:24.126601 IP 192.168.1.10.5002 > 172.31.67.4.25: Flags [S]  
10:55:24.126608 IP 192.168.1.10.5003 > 172.31.67.4.37: Flags [S]
```

Which of the following ACLs provides the BEST protection against the above attack and any further attacks from the same IP, while minimizing service interruption?

- A. DENY TCP From ANY to 172.31.64.4
- B. Deny UDP from 192.168.1.0/24 to 172.31.67.0/24
- C. Deny IP from 192.168.1.10/32 to 0.0.0.0/0
- D. Deny TCP from 192.168.1.10 to 172.31.67.4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 313

The IT department needs to prevent users from installing untested applications.

Which of the following would provide the BEST solution?

- A. Job rotation
- B. Least privilege
- C. Account lockout
- D. Antivirus

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 314

An attack that is using interference as its main attack to impede network traffic is which of the following?

- A. Introducing too much data to a targets memory allocation
- B. Utilizing a previously unknown security flaw against the target
- C. Using a similar wireless configuration of a nearby network
- D. Inundating a target system with SYN requests

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 315

An organization wants to conduct secure transactions of large data files. Before encrypting and exchanging the data files, the organization wants to ensure a secure exchange of keys.

Which of the following algorithms is appropriate for securing the key exchange?

- A. DES
- B. Blowfish
- C. DSA
- D. Diffie-Hellman
- E. 3DES

Correct Answer: D

QUESTION 316

Ann, a college professor, was recently reprimanded for posting disparaging remarks re-grading her coworkers on a web site. Ann stated that she was not aware that the public was able to view her remarks.

Which of the following security-related trainings could have made Ann aware of the repercussions of her

actions?

- A. Data Labeling and disposal
- B. Use of social networking
- C. Use of P2P networking
- D. Role-based training

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 317

During a recent audit, it was discovered that many services and desktops were missing security patches.

Which of the following BEST describes the assessment that was performed to discover this issue?

- A. Network mapping
- B. Vulnerability scan
- C. Port Scan
- D. Protocol analysis

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 318

When generating a request for a new x.509 certificate for securing a website, which of the following is the MOST appropriate hashing algorithm?

- A. RC4
- B. MD5
- C. HMAC
- D. SHA

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 319

The administrator installs database software to encrypt each field as it is written to disk.

Which of the following describes the encrypted data?

- A. In-transit
- B. In-use

- C. Embedded
- D. At-rest

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 320

Which of the following allows an application to securely authenticate a user by receiving credentials from a web domain?

- A. TACACS+
- B. RADIUS
- C. Kerberos
- D. SAML

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 321

A network technician is trying to determine the source of an ongoing network based attack.

Which of the following should the technician use to view IPv4 packet data on a particular internal network segment?

- A. Proxy
- B. Protocol analyzer
- C. Switch
- D. Firewall

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 322

The security administrator has noticed cars parking just outside of the building fence line.

Which of the following security measures can the administrator use to help protect the company's WiFi network against war driving? (Select TWO)

- A. Create a honeynet
- B. Reduce beacon rate
- C. Add false SSIDs
- D. Change antenna placement

- E. Adjust power level controls
- F. Implement a warning banner

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 323

A security administrator suspects that data on a server has been exfiltrated as a result of unauthorized remote access.

Which of the following would assist the administrator in confirming the suspicions? (Select TWO)

- A. Networking access control
- B. DLP alerts
- C. Log analysis
- D. File integrity monitoring
- E. Host firewall rules

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 324

A company is deploying a new VoIP phone system. They require 99.999% uptime for their phone service and are concerned about their existing data network interfering with the VoIP phone system. The core switches in the existing data network are almost fully saturated.

Which of the following options will provide the best performance and availability for both the VoIP traffic, as well as the traffic on the existing data network?

- A. Put the VoIP network into a different VLAN than the existing data network.
- B. Upgrade the edge switches from 10/100/1000 to improve network speed
- C. Physically separate the VoIP phones from the data network
- D. Implement flood guards on the data network

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 325

A server administrator needs to administer a server remotely using RDP, but the specified port is closed on the outbound firewall on the network.

How can the administrator access the server using RDP on a port other than the typical registered port for the RDP protocol?

- A. TLS
- B. MPLS
- C. SCP
- D. SSH

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 326

Which of the following can be used to control specific commands that can be executed on a network infrastructure device?

- A. LDAP
- B. Kerberos
- C. SAML
- D. TACACS+

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 327

Company XYZ has decided to make use of a cloud-based service that requires mutual, certificate-based authentication with its users. The company uses SSL-inspecting IDS at its network boundary and is concerned about the confidentiality of the mutual authentication.

Which of the following model prevents the IDS from capturing credentials used to authenticate users to the new service or keys to decrypt that communication?

- A. Use of OATH between the user and the service and attestation from the company domain
- B. Use of active directory federation between the company and the cloud-based service
- C. Use of smartcards that store x.509 keys, signed by a global CA
- D. Use of a third-party, SAML-based authentication service for attestation

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 328

Six months into development, the core team assigned to implement a new internal piece of software must convene to discuss a new requirement with the stake holders. A stakeholder identified a missing feature critical to the organization, which must be implemented. The team needs to validate the feasibility of the newly introduced requirement and ensure it does not introduce new vulnerabilities to the software and other applications that will integrate with it.

Which of the following BEST describes what the company?

- A. The system integration phase of the SDLC
- B. The system analysis phase of SSDSLC
- C. The system design phase of the SDLC
- D. The system development phase of the SDLC

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 329

A company is investigating a data compromise where data exfiltration occurred. Prior to the investigation, the supervisor terminates an employee as a result of the suspected data loss. During the investigation, the supervisor is absent for the interview, and little evidence can be provided from the role-based authentication system in use by the company.

The situation can be identified for future mitigation as which of the following?

- A. Job rotation
- B. Log failure
- C. Lack of training
- D. Insider threat

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 330

A security administrator needs an external vendor to correct an urgent issue with an organization's physical access control system (PACS). The PACS does not currently have internet access because it is running a legacy operation system.

Which of the following methods should the security administrator select the best balances security and efficiency?

- A. Temporarily permit outbound internet access for the pacs so desktop sharing can be set up
- B. Have the external vendor come onsite and provide access to the PACS directly
- C. Set up VPN concentrator for the vendor and restrict access to the PACS using desktop sharing
- D. Set up a web conference on the administrator's pc; then remotely connect to the pacs

Correct Answer: C

Explanation

Explanation/Reference:

QUESTION 331

A datacenter manager has been asked to prioritize critical system recovery priorities.

Which of the following is the MOST critical for immediate recovery?

- A. Communications software
- B. Operating system software
- C. Weekly summary reports to management
- D. Financial and production software

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 332

Which of the following techniques can be bypass a user or computer's web browser privacy settings? (Select Two)

- A. SQL injection
- B. Session hijacking
- C. Cross-site scripting
- D. Locally shared objects
- E. LDAP injection

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 333

When designing a web based client server application with single application server and database cluster backend, input validation should be performed:

- A. On the client
- B. Using database stored procedures
- C. On the application server
- D. Using HTTPS

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 334

Which of the following delineates why it is important to perform egress filtering and monitoring on Internet connected security zones of interfaces on a firewall?

- A. Egress traffic is more important than ingress traffic for malware prevention

- B. To rebalance the amount of outbound traffic and inbound traffic
- C. Outbound traffic could be communicating to known botnet sources
- D. To prevent DDoS attacks originating from external network

Correct Answer: C

QUESTION 339

Which of the following is the appropriate network structure used to protect servers and services that must be provided to external clients without completely eliminating access for internal users?

- A. NAC

- B. VLAN
- C. DMZ
- D. Subnet

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 340

An administrator has configured a new Linux server with the FTP service. Upon verifying that the service was configured correctly, the administrator has several users test the FTP service. Users report that they are able to connect to the FTP service and download their personal files, however, they cannot transfer new files to the server.

Which of the following will most likely fix the uploading issue for the users?

- A. Create an ACL to allow the FTP service write access to user directories
- B. Set the Boolean selinux value to allow FTP home directory uploads
- C. Reconfigure the ftp daemon to operate without utilizing the PSAV mode
- D. Configure the FTP daemon to utilize PAM authentication pass through user permissions

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 341

An administrator thinks the UNIX systems may be compromised, but a review of system log files provides no useful information. After discussing the situation with the security team, the administrator suspects that the attacker may be altering the log files and removing evidence of intrusion activity.

Which of the following actions will help detect attacker attempts to further alter log files?

- A. Enable verbose system logging
- B. Change the permissions on the user's home directory
- C. Implement remote syslog
- D. Set the bash_history log file to "read only"

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 342

A global gaming console manufacturer is launching a new gaming platform to its customers.

Which of the following controls reduces the risk created by malicious gaming customers attempting to circumvent control by way of modifying consoles?

- A. Firmware version control
- B. Manual software upgrades
- C. Vulnerability scanning
- D. Automatic updates
- E. Network segmentation
- F. Application firewalls

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 343

An audit has revealed that database administrators are also responsible for auditing database changes and backup logs.

Which of the following access control methodologies would BEST mitigate this concern?

- A. Time of day restrictions
- B. Principle of least privilege
- C. Role-based access control
- D. Separation of duties

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 344

An external contractor, who has not been given information about the software or network architecture, is conducting a penetration test. Which of the following BEST describes the test being performed?

- A. Black box
- B. White box
- C. Passive reconnaissance
- D. Vulnerability scan

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 345

A security administrator receives an alert from a third-party vendor that indicates a certificate that was installed in the browser has been hijacked at the root of a small public CA. The security administrator knows there are at least four different browsers in use on more than a thousand computers in the domain worldwide.

Which of the following solutions would be BEST for the security administrator to implement to most efficiently assist with this issue?

- A. SSL
- B. CRL
- C. PKI
- D. ACL

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 346

A security analyst has set up a network tap to monitor network traffic for vulnerabilities. Which of the following techniques would BEST describe the approach the analyst has taken?

- A. Compliance scanning
- B. Credentialed scanning
- C. Passive vulnerability scanning
- D. Port scanning

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 347

Due to regulatory requirements, a security analyst must implement full drive encryption on a Windows file server.

Which of the following should the analyst implement on the system to BEST meet this requirement? (Choose two.)

- A. Enable and configure EFS on the file system.
- B. Ensure the hardware supports TPM, and enable it in the BIOS.
- C. Ensure the hardware supports VT-X, and enable it in the BIOS.
- D. Enable and configure BitLocker on the drives.
- E. Enable and configure DFS across the file system.

Correct Answer: BD

QUESTION 350

While performing a penetration test, the technicians want their efforts to go unnoticed for as long as possible while they gather useful data about the network they are assessing.

Which of the following would be the BEST choice for the technicians?

- A. Vulnerability scanner
- B. Offline password cracker
- C. Packet sniffer
- D. Banner grabbing

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 351

A security analyst captures forensic evidence from a potentially compromised system for further investigation. The evidence is documented and securely stored to FIRST:

- A. maintain the chain of custody.

- B. preserve the data.
- C. obtain a legal hold.
- D. recover data at a later time.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 352

A security analyst is investigating a security breach. Upon inspection of the audit and access logs, the analyst notices the host was accessed and the /etc/passwd file was modified with a new entry for username "gotcha" and user ID of 0. Which of the following are the MOST likely attack vector and tool the analyst should use to determine if the attack is still ongoing? (Select TWO)

- A. Logic bomb
- B. Backdoor
- C. Keylogger
- D. Netstat
- E. Tracert
- F. Ping

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 353

A company recently replaced its unsecure email server with a cloud-based email and collaboration solution that is managed and insured by a third party. Which of the following actions did the company take regarding risks related to its email and collaboration services?

- A. Transference
- B. Acceptance
- C. Mitigation
- D. Deterrence

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 354

A security administrator is reviewing the following network capture:

```
192.168.20.43:2043 -> 10.234.66.21:80  
POST "192.168.20.43 https://www.banksite.com<ENTER>JoeUsr<BackSPACE>erPassword<ENTER>"
```

Which of the following malware is MOST likely to generate the above information?

- A. Keylogger
- B. Ransomware
- C. Logic bomb
- D. Adware

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 355

A network administrator adds an ACL to allow only HTTPS connections from host 192.168.2.3 to web server 192.168.5.2. After applying the rule, the host is unable to access the server. The network administrator runs the output and notices the configuration below:

```
accesslist 102 permit tcp host 192.168.2.6 eq 3389 host 192.168.5.2
accesslist 102 deny ip any any log
accesslist 102 permit tcp host 192.168.2.3 eq 443 host 192.168.5.2
```

Which of the following rules would be BEST to resolve the issue?

- A.

```
accesslist 102 permit tcp host 192.168.2.3 host 192.168.5.2 eq 443
accesslist 102 permit tcp host 192.168.2.6 host 192.168.5.2 eq 3389
accesslist 102 deny ip any any log
```
- B.

```
accesslist 102 permit tcp host 192.168.2.6 host 192.168.5.2 eq 3389
accesslist 102 deny ip any any log
accesslist 102 permit tcp host 192.168.2.3 host 192.168.5.2 eq 443
```
- C.

```
accesslist 102 permit tcp host 192.168.2.3 eq 443 host 192.168.5.2
accesslist 102 deny ip any any log
accesslist 102 permit tcp host 192.168.2.6 eq 3389 host 192.168.5.2
```
- D.

```
accesslist 102 permit tcp host 192.168.2.3 host 192.168.5.2
accesslist 102 permit tcp host 192.168.2.6 eq 3389 host 192.168.5.2
accesslist 102 deny ip any any log
```

QUESTION 357

A security analyst is working on a project that requires the implementation of a stream cipher. Which of the following should the analyst use?

- A. Hash function
- B. Elliptic curve
- C. Symmetric algorithm
- D. Public key cryptography

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 358

Which of the following would allow for the QUICKEST restoration of a server into a warm recovery site in a case in which server data mirroring is not enabled?

- A. Full backup
- B. Incremental backup
- C. Differential backup
- D. Snapshot

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 359

In determining when it may be necessary to perform a credentialed scan against a system instead of a non-credentialed scan, which of the following requirements is MOST likely to influence this decision?

- A. The scanner must be able to enumerate the host OS of devices scanned.
- B. The scanner must be able to footprint the network.
- C. The scanner must be able to check for open ports with listening services.
- D. The scanner must be able to audit file system permissions

Correct Answer: D

Section: (none)

Explanation

QUESTION 360

The computer resource center issued smartphones to all first-level and above managers. The managers have the ability to install mobile tools. Which of the following tools should be implemented to control the types of tools the managers install?

- A. Download manager
- B. Content manager
- C. Segmentation manager
- D. Application manager

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 361

Which of the following BEST describes a network-based attack that can allow an attacker to take full control of a vulnerable host?

- A. Remote exploit
- B. Amplification
- C. Sniffing
- D. Man-in-the-middle

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 362

A security auditor is putting together a report for the Chief Executive Officer (CEO) on personnel security and its impact on the security posture of the whole organization. Which of the following would be the MOST important factor to consider when it comes to personnel security?

- A. Insider threats
- B. Privilege escalation
- C. Hacktivist
- D. Phishing through social media
- E. Corporate espionage

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 363

A security administrator wants to configure a company's wireless network in a way that will prevent wireless clients from broadcasting the company's SSID. Which of the following should be configured on the company's

access points?

- A. Enable ESSID broadcast
- B. Enable protected management frames
- C. Enable wireless encryption
- D. Disable MAC authentication
- E. Disable WPS
- F. Disable SSID broadcast

Correct Answer: F

Section: (none)

Explanation

Explanation/Reference:

QUESTION 364

A wireless network has the following design requirements:

Authentication must not be dependent on enterprise directory service

It must allow background reconnection for mobile users

It must not depend on user certificates

Which of the following should be used in the design to meet the requirements? (Choose two.)

- A. PEAP
- B. PSK
- C. Open systems authentication
- D. EAP-TLS
- E. Captive portals

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 365

Which of the following strategies should a systems architect use to minimize availability risks due to insufficient storage capacity?

- A. High availability
- B. Scalability
- C. Distributive allocation
- D. Load balancing

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 366

A security engineer wants to implement a site-to-site VPN that will require SSL certificates for mutual authentication. Which of the following should the engineer implement if the design requires client MAC address to be visible across the tunnel?

- A. Tunnel mode IPSec
- B. Transport mode VPN IPSec
- C. L2TP
- D. SSL VPN

Correct Answer: D

Section: (none)

Explanation

QUESTION 367

After surfing the Internet, Joe, a user, woke up to find all his files were corrupted. His wallpaper was replaced by a message stating the files were encrypted and he needed to transfer money to a foreign country to recover them. Joe is a victim of:

- A. a keylogger
- B. spyware
- C. ransomware
- D. a logic bomb

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 368

Security administrators attempted corrective action after a phishing attack. Users are still experiencing trouble logging in, as well as an increase in account lockouts. Users' email contacts are complaining of an increase in spam and social networking requests. Due to the large number of affected accounts, remediation must be accomplished quickly.

Which of the following actions should be taken FIRST? (Select TWO)

- A. Disable the compromised accounts
- B. Update WAF rules to block social networks
- C. Remove the compromised accounts with all AD groups
- D. Change the compromised accounts' passwords
- E. Disable the open relay on the email server
- F. Enable sender policy framework

Correct Answer: EF

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Sender Policy Framework (SPF) is a simple email-validation system designed to detect email spoofing by providing a mechanism to allow receiving mail exchangers to check that incoming mail from a domain comes from a host authorized by that domain's administrators.

In a Small Business Server environment, you may have to prevent your Microsoft Exchange Server-based server from being used as an open relay SMTP server for unsolicited commercial e-mail messages, or spam. You may also have to clean up the Exchange server's SMTP queues to delete the unsolicited commercial e-mail messages.

If your Exchange server is being used as an open SMTP relay, you may experience one or more of the following symptoms:

The Exchange server cannot deliver outbound SMTP mail to a growing list of e-mail domains.

Internet browsing is slow from the server and from local area network (LAN) clients.

Free disk space on the Exchange server in the location of the Exchange information store databases or the Exchange information store transaction logs is reduced more rapidly than you expect.

The Microsoft Exchange information store databases spontaneously dismount. You may be able to manually mount the stores by using Exchange System Manager, but the stores may dismount on their own after they run for a short time. For more information, click the following article number to view the article in the Microsoft Knowledge Base.

QUESTION 369

Which of the following allows an auditor to test proprietary-software compiled code for security flaws?

- A. Fuzzing
- B. Static review
- C. Code signing
- D. Regression testing

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 371

A security administrator wants to implement a logon script that will prevent MITM attacks on the local LAN.

Which of the following commands should the security administrator implement within the script to accomplish

this task?

- A. arp - s 192.168.1.1 00-3a-d1-fa-b1-06
- B. dig - x@192.168.1.1 mypc.comptia.com
- C. nmap - A - T4 192.168.1.1
- D. tcpdump - Inv host 192.168.1.1 or either 00:3a:d1:fa:b1:06

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 372

Which of the following is the BEST reason for salting a password hash before it is stored in a database?

- A. To prevent duplicate values from being stored
- B. To make the password retrieval process very slow
- C. To protect passwords from being saved in readable format
- D. To prevent users from using simple passwords for their access credentials

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 373

An actor downloads and runs a program against a corporate login page. The program imports a list of usernames and passwords, looking for a successful attempt.

Which of the following terms BEST describes the actor in this situation?

- A. Script kiddie
- B. Hacktivist
- C. Cryptologist
- D. Security auditor

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 374

An organization wants to utilize a common, Internet-based third-party provider for authorization and authentication. The provider uses a technology based on OAuth 2.0 to provide required services. To which of the following technologies is the provider referring?

- A. Open ID Connect
- B. SAML
- C. XACML

D. LDAP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 375

A penetration tester harvests potential usernames from a social networking site. The penetration tester then uses social engineering to attempt to obtain associated passwords to gain unauthorized access to shares on a network server.

Which of the following methods is the penetration tester MOST likely using?

- A. Escalation of privilege
- B. SQL injection
- C. Active reconnaissance
- D. Proxy server

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 376

Which of the following could occur when both strong and weak ciphers are configured on a VPN concentrator? (Select TWO)

- A. An attacker could potentially perform a downgrade attack.
- B. The connection is vulnerable to resource exhaustion.
- C. The integrity of the data could be at risk.
- D. The VPN concentrator could revert to L2TP.
- E. The IPSec payload reverted to 16-bit sequence numbers.

Correct Answer: AE

QUESTION 378

A web developer improves client access to the company's REST API. Authentication needs to be tokenized but not expose the client's password.

Which of the following methods would BEST meet the developer's requirements?

- A. SAML
- B. LDAP
- C. OAuth
- D. Shibboleth

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 379

A vulnerability scan is being conducted against a desktop system. The scan is looking for files, versions, and registry values known to be associated with system vulnerabilities. Which of the following BEST describes the type of scan being performed?

- A. Non-intrusive
- B. Authenticated
- C. Credentialed
- D. Active

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 380

A security analyst is updating a BIA document. The security analyst notices the support vendor's time to replace a server hard drive went from eight hours to two hours.

Given these new metrics, which of the following can be concluded? (Select TWO)

- A. The MTTR is faster.
- B. The MTTR is slower.
- C. The RTO has increased.
- D. The RTO has decreased.
- E. The MTTF has increased.
- F. The MTTF has decreased.

Correct Answer: AD

Explanation

Explanation/Reference:

QUESTION 383

A third-party penetration testing company was able to successfully use an ARP cache poison technique to gain root access on a server. The tester successfully moved to another server that was not in the original network.

Which of the following is the MOST likely method used to gain access to the other host?

- A. Backdoor
- B. Pivoting
- C. Persistence
- D. Logic bomb

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 384

Ann, a security administrator, wants to ensure credentials are encrypted in transit when implementing a RADIUS server for SSO.

Which of the following are needed given these requirements? (Select TWO)

- A. Public key
- B. Shared key
- C. Elliptic curve
- D. MD5
- E. Private key
- F. DES

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 385

The POODLE attack is an MITM exploit that affects:

- A. TLS1.0 with CBC mode cipher
- B. SSLv2.0 with CBC mode cipher
- C. SSLv3.0 with CBC mode cipher
- D. SSLv3.0 with ECB mode cipher

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

A flaw was found in the way SSL 3.0 handled padding bytes when decrypting messages encrypted using block ciphers in cipher block chaining (CBC) mode.

How To Protect your Server Against the POODLE SSLv3 Vulnerability On October 14th, 2014, a vulnerability in version 3 of the SSL encryption protocol was disclosed. This vulnerability, dubbed POODLE (Padding Oracle On Downgraded Legacy Encryption), allows an attacker to read information encrypted with this version of the protocol in plain text using a man-in-the-middle attack.

Although SSLv3 is an older version of the protocol which is mainly obsolete, many pieces of software still fall back on SSLv3 if better encryption options are not available. More importantly, it is possible for an attacker to force SSLv3 connections if it is an available alternative for both participants attempting a connection.

The POODLE vulnerability affects any services or clients that make it possible to communicate using SSLv3. Because this is a flaw with the protocol design, and not an implementation issue, every piece of software that uses SSLv3 is vulnerable.

To find out more information about the vulnerability, consult the CVE information found at CVE-2014-3566.

What is the POODLE Vulnerability?

The POODLE vulnerability is a weakness in version 3 of the SSL protocol that allows an attacker in a man-in-the-middle context to decipher the plain text content of an SSLv3 encrypted message.

Who is Affected by this Vulnerability?

This vulnerability affects every piece of software that can be coerced into communicating with SSLv3. This means that any software that implements a fallback mechanism that includes SSLv3 support is vulnerable and can be exploited.

Some common pieces of software that may be affected are web browsers, web servers, VPN servers, mail servers, etc.

How Does It Work?

In short, the POODLE vulnerability exists because the SSLv3 protocol does not adequately check the padding bytes that are sent with encrypted messages.

Since these cannot be verified by the receiving party, an attacker can replace these and pass them on to the intended destination. When done in a specific way, the modified payload will potentially be accepted by the recipient without complaint.

An average of once out of every 256 requests will be accepted at the destination, allowing the attacker to decrypt a single byte. This can be repeated easily in order to progressively decrypt additional bytes. Any attacker able to repeatedly force a participant to resend data using this protocol can break the encryption in a very short amount of time.

How Can I Protect Myself?

Actions should be taken to ensure that you are not vulnerable in your roles as both a client and a server. Since encryption is usually negotiated between clients and servers, it is an issue that involves both parties.

Servers and clients should take steps to disable SSLv3 support completely. Many applications use better encryption by default, but implement SSLv3 support as a fallback option.

This should be disabled, as a malicious user can force SSLv3 communication if both participants allow it as an acceptable method.

QUESTION 386

To determine the ALE of a particular risk, which of the following must be calculated? (Select two.)

- A. ARO
- B. ROI
- C. RPO
- D. SLE
- E. RTO

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 387

Which of the following are used to increase the computing time it takes to brute force a password using an offline attack? (Select TWO)

- A. XOR
- B. PBKDF2
- C. bcrypt
- D. HMAC
- E. RIPEMD

Correct Answer: BC

Explanation

Explanation/Reference:

QUESTION 397

An incident involving a workstation that is potentially infected with a virus has occurred. The workstation may have sent confidential data to an unknown internet server.

Which of the following should a security analyst do FIRST?

- A. Make a copy of everything in memory on the workstation.
- B. Turn off the workstation.
- C. Consult information security policy.
- D. Run a virus scan.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 398

A vice president at a manufacturing organization is concerned about desktops being connected to the network. Employees need to log onto the desktops' local account to verify that a product is being created within specifications; otherwise, the desktops should be as isolated as possible. Which of the following is the BEST way to accomplish this?

- A. Put the desktops in the DMZ.
- B. Create a separate VLAN for the desktops.
- C. Air gap the desktops.
- D. Join the desktops to an ad-hoc network.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 399

An in-house penetration tester has been asked to evade a new DLP system. The tester plans to exfiltrate data through steganography.

Discovery of which of the following would help catch the tester in the act?

- A. Abnormally high numbers of outgoing instant messages that contain obfuscated text
- B. Large-capacity USB drives on the tester's desk with encrypted zip files
- C. Outgoing emails containing unusually large image files
- D. Unusual SFTP connections to a consumer IP address

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 400

A member of the admins group reports being unable to modify the "changes" file on a server.

The permissions on the file are as follows:

| Permissions | User | Group | File |
|-------------|--------|--------|---------|
| -rwxrw-r--+ | Admins | Admins | changes |

Based on the output above, which of the following BEST explains why the user is unable to modify the "changes" file?

- A. The SELinux mode on the server is set to "enforcing."
- B. The SELinux mode on the server is set to "permissive."
- C. An ACL has been added to the permissions for the file.
- D. The admins group does not have adequate permissions to access the file.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 401

A penetration tester is conducting an assessment on Comptia.org and runs the following command from a coffee shop while connected to the public Internet: `c:\nslookup -querytype=MX comptia.org`
Server: Unknown

Address: 198.51.100.45

comptia.org MX preference=10, mail exchanger = 92.68.102.33
comptia.org MX preference=20, mail exchanger = exchg1.comptia.org
exchg1.comptia.org internet address = 192.168.102.67

Which of the following should the penetration tester conclude about the command output?

- A. The public/private views on the Comptia.org DNS servers are misconfigured.
- B. Comptia.org is running an older mail server, which may be vulnerable to exploits.
- C. The DNS SPF records have not been updated for Comptia.org.
- D. 192.168.102.67 is a backup mail server that may be more vulnerable to attack.

Correct Answer: D

Explanation

Explanation/Reference:

QUESTION 402

A security analyst is inspecting the results of a recent internal vulnerability scan that was performed against intranet services.

The scan reports include the following critical-rated vulnerability: Title: Remote Command Execution vulnerability in web server Rating: Critical (CVSS 10.0)

Threat actor: any remote user of the web server

Confidence: certain

Recommendation: apply vendor patches

Which of the following actions should the security analyst perform FIRST?

- A. Escalate the issue to senior management.
- B. Apply organizational context to the risk rating.
- C. Organize for urgent out-of-cycle patching.
- D. Exploit the server to check whether it is a false positive.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 403

Company A agrees to provide perimeter protection, power, and environmental support with measurable goals for Company B, but will not be responsible for user authentication or patching of operating systems within the perimeter.

Which of the following is being described?

- A. Service level agreement
- B. Memorandum of understanding
- C. Business partner agreement
- D. Interoperability agreement

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 404

A company is deploying smartphones for its mobile salesforce. These devices are for personal and business use but are owned by the company. Sales personnel will save new customer data via a custom application developed for the company. This application will integrate with the contact information stored in the smartphones and will populate new customer records onto it.

The customer application's data is encrypted at rest, and the application's connection to the back office system is considered secure. The Chief Information Security Officer (CISO) has concerns that customer contact information may be accidentally leaked due to the limited security capabilities of the devices and the planned controls.

Which of the following will be the MOST efficient security control to implement to lower this risk?

- A. Implement a mobile data loss agent on the devices to prevent any user manipulation with the contact information.
- B. Restrict screen capture features on the devices when using the custom application and the contact information.
- C. Restrict contact information storage dataflow so it is only shared with the customer application.
- D. Require complex passwords for authentication when accessing the contact information.

Correct Answer: C

QUESTION 405

The Chief Information Security Officer (CISO) is asking for ways to protect against zero-day exploits. The CISO is concerned that an unrecognized threat could compromise corporate data and result in regulatory fines as well as poor corporate publicity. The network is mostly flat, with split staff/guest wireless functionality. Which of the following equipment **MUST** be deployed to guard against unknown threats?

- A. Cloud-based antivirus solution, running as local admin, with push technology for definition updates
- B. Implementation of an off-site datacenter hosting all company data, as well as deployment of VDI for all client computing needs
- C. Host-based heuristic IPS, segregated on a management VLAN, with direct control of the perimeter firewall ACLs
- D. Behavior-based IPS with a communication link to a cloud-based vulnerability and threat feed

Correct Answer: D

QUESTION 406

An organization has several production-critical SCADA supervisory systems that cannot follow the normal 30-day patching policy.

Which of the following **BEST** maximizes the protection of these systems from malicious software?

- A. Configure a firewall with deep packet inspection that restricts traffic to the systems.
- B. Configure a separate zone for the systems and restrict access to known ports.
- C. Configure the systems to ensure only necessary applications are able to run.
- D. Configure the host firewall to ensure only the necessary applications have listening ports

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 407

An organization identifies a number of hosts making outbound connections to a known malicious IP over port TCP 80. The organization wants to identify the data being transmitted and prevent future connections to this IP.

Which of the following should the organization do to achieve this outcome?

- A. Use a protocol analyzer to reconstruct the data and implement a web-proxy.
- B. Deploy a web-proxy and then blacklist the IP on the firewall.
- C. Deploy a web-proxy and implement IPS at the network edge.
- D. Use a protocol analyzer to reconstruct the data and blacklist the IP on the firewall.

Correct Answer: D

QUESTION 408

Legal authorities notify a company that its network has been compromised for the second time in two years. The investigation shows the attackers were able to use the same vulnerability on different systems in both attacks.

Which of the following would have allowed the security team to use historical information to protect against the second attack?

- A. Key risk indicators
- B. Lessons learned
- C. Recovery point objectives
- D. Tabletop exercise

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 409

A small company's Chief Executive Officer (CEO) has asked its Chief Security Officer (CSO) to improve the company's security posture quickly with regard to targeted attacks.

Which of the following should the CSO conduct FIRST?

- A. Survey threat feeds from services inside the same industry.
- B. Purchase multiple threat feeds to ensure diversity and implement blocks for malicious traffic
- C. Conduct an internal audit against industry best practices to perform a qualitative analysis.
- D. Deploy a UTM solution that receives frequent updates from a trusted industry vendor.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 416

A security architect has convened a meeting to discuss an organization's key management policy. The organization has a reliable internal key management system, and some argue that it would be best to manage the cryptographic keys internally as opposed to using a solution from a third party. The company should use:

- A. the current internal key management system.
- B. a third-party key management system that will reduce operating costs.
- C. risk benefits analysis results to make a determination.
- D. a software solution including secure key escrow capabilities.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 417

After a recent internal breach, a company decided to regenerate and reissue all certificates used in the transmission of confidential information. The company places the greatest importance on confidentiality and non-repudiation, and decided to generate dual key pairs for each client. Which of the following BEST describes how the company will use these certificates?

- A. One key pair will be used for encryption and decryption. The other will be used to digitally sign the data.
- B. One key pair will be used for encryption. The other key pair will provide extended validation.
- C. Data will be encrypted once by each key, doubling the confidentiality and non-repudiation strength.
- D. One key pair will be used for internal communication, and the other will be used for external communication.

Correct Answer: A

QUESTION 444

A security analyst is acquiring data from a potential network incident.
Which of the following evidence is the analyst MOST likely to obtain to determine the incident?

- A. Volatile memory capture
- B. Traffic and logs
- C. Screenshots
- D. System image capture

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 445

A cybersecurity analyst is looking into the payload of a random packet capture file that was selected for analysis. The analyst notices that an internal host had a socket established with another internal host over a non-standard port.
Upon investigation, the origin host that initiated the socket shows this output:

```
usera@host>history  
mkdir /local/usr/bin/somedirectory  
nc -l 192.168.5.1 -p 9856  
ping -c 30 8.8.8.8 -a 600  
rm /etc/dir2/somefile  
rm -rm /etc/dir2/
```

```
traceroute 8.8.8.8
```

```
pskill pid 9487
```

```
usera@host>
```

Given the above output, which of the following commands would have established the questionable socket?

- A. traceroute 8.8.8.8
- B. ping -l 30 8.8.8.8 -a 600
- C. nc -l 192.168.5.1 -p 9856
- D. pskill pid 9487

QUESTION 461

A systems administrator wants to implement a wireless protocol that will allow the organization to authenticate mobile devices prior to providing the user with a captive portal login. Which of the following should the systems administrator configure?

- A. L2TP with MAC filtering
- B. EAP-TTLS
- C. WPA2-CCMP with PSK
- D. RADIUS federation

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

RADIUS generally includes 802.1X that pre-authenticates devices.

QUESTION 462

Which of the following uses precomputed hashes to guess passwords?

- A. Iptables
- B. NAT tables
- C. Rainbow tables
- D. ARP tables

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 463

A Chief Information Security Officer (CISO) has tasked a security analyst with assessing the security posture of an organization and which internal factors would contribute to a security compromise. The analyst performs a walk-through of the organization and discovers there are multiple instances of unlabeled optical media on office desks. Employees in the vicinity either do not claim ownership or disavow any knowledge concerning who owns the media. Which of the following is the MOST immediate action to be taken?

- A. Confiscate the media and dispose of it in a secure manner as per company policy.
- B. Confiscate the media, insert it into a computer, find out what is on the disc, and then label it and return it to where it was found.
- C. Confiscate the media and wait for the owner to claim it. If it is not claimed within one month, shred it.
- D. Confiscate the media, insert it into a computer, make a copy of the disc, and then return the original to where it was found.

Correct Answer: A

Section: (none)

Explanation

QUESTION 464

A company has noticed multiple instances of proprietary information on public websites. It has also observed an increase in the number of email messages sent to random employees containing malicious links and PDFs. Which of the following changes should the company make to reduce the risks associated with phishing attacks? (Select TWO)

- A. Install an additional firewall
- B. Implement a redundant email server
- C. Block access to personal email on corporate systems
- D. Update the X.509 certificates on the corporate email server
- E. Update corporate policy to prohibit access to social media websites
- F. Review access violation on the file server

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 465

A security analyst is investigating a potential breach. Upon gathering, documenting, and securing the evidence, which of the following actions is the NEXT step to minimize the business impact?

- A. Launch an investigation to identify the attacking host
- B. Initiate the incident response plan
- C. Review lessons learned captured in the process
- D. Remove malware and restore the system to normal operation

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 466

Joe, a salesman, was assigned to a new project that requires him to travel to a client site. While waiting for a flight, Joe, decides to connect to the airport wireless network without connecting to a VPN, and he sends confidential emails to fellow colleagues. A few days later, the company experiences a data breach. Upon investigation, the company learns Joe's emails were intercepted. Which of the following MOST likely caused the data breach?

- A. Policy violation
- B. Social engineering
- C. Insider threat
- D. Zero-day attack

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 467

A company is performing an analysis of the corporate enterprise network with the intent of identifying what will cause losses in revenue, referrals, and/or reputation when out of commission. Which of the following is an element of a BIA that is being addressed?

- A. Mission-essential function
- B. Single point of failure
- C. backup and restoration plans
- D. Identification of critical systems

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The BIA is composed of the following three steps: Determine mission/business processes and recovery criticality. Mission/business processes supported by the system are identified and the impact of a system disruption to those processes is determined along with outage impacts and estimated downtime.

QUESTION 468

A company wants to ensure confidential data from storage media is sanitized in such a way that the drive cannot be reused. Which of the following method should the technician use?

- A. Shredding
- B. Wiping
- C. Low-level formatting
- D. Repartitioning
- E. Overwriting

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 469

A forensic expert is given a hard drive from a crime scene and is asked to perform an investigation. Which of the following is the FIRST step the forensic expert needs to take the chain of custody?

- A. Make a forensic copy
- B. Create a hash of the hard drive
- C. Recover the hard drive data
- D. Update the evidence log

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 470

An incident response manager has started to gather all the facts related to a SIEM alert showing multiple systems may have been compromised.

The manager has gathered these facts:

The breach is currently indicated on six user PCs

One service account is potentially compromised

Executive management has been notified

In which of the following phases of the IRP is the manager currently working?

- A. Recovery
- B. Eradication
- C. Containment
- D. Identification

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 471

A stock trading company had the budget for enhancing its secondary datacenter approved. Since the main site is a hurricane-affected area and the disaster recovery site is 100 mi (161 km) away, the company wants to ensure its business is always operational with the least amount of man hours needed. Which of the following types of disaster recovery sites should the company implement?

- A. Hot site
- B. Warm site
- C. Cold site
- D. Cloud-based site

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 472

User from two organizations, each with its own PKI, need to begin working together on a joint project. Which of the following would allow the users of the separate PKIs to work together without connection errors?

- A. Trust model
- B. Stapling
- C. Intermediate CA
- D. Key escrow

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 473

A security analyst is mitigating a pass-the-hash vulnerability on a Windows infrastructure. Given the requirement, which of the following should the security analyst do to MINIMIZE the risk?

- A. Enable CHAP
- B. Disable NTLM
- C. Enable Kerberos
- D. Disable PAP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 474

A security analyst is reviewing an assessment report that includes software versions, running services, supported encryption algorithms, and permission settings. Which of the following produced the report?

- A. Vulnerability scanner
- B. Protocol analyzer
- C. Network mapper
- D. Web inspector

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 475

A Chief Information Officer (CIO) asks the company's security specialist if the company should spend any funds on malware protection for a specific server. Based on a risk assessment, the ARO value of a malware infection for a server is 5 and the annual cost for the malware protection is \$2500.

Which of the following SLE values warrants a recommendation against purchasing the malware protection?

- A. \$500
- B. \$1000
- C. \$2000
- D. \$2500

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 476

A recent internal audit is forcing a company to review each internal business unit's VMs because the cluster they are installed on is in danger of running out of computer resources. Which of the following vulnerabilities exist?

- A. Buffer overflow
- B. End-of-life systems
- C. System sprawl
- D. Weak configuration

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 477

A security analyst is attempting to identify vulnerabilities in a customer's web application without impacting the system or its data.

Which of the following BEST describes the vulnerability scanning concept performed?

- A. Aggressive scan
- B. Passive scan
- C. Non-credentialed scan
- D. Compliance scan

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Passive scanning is a method of vulnerability detection that relies on information gleaned from network data that is captured from a target computer without direct interaction.

Packet sniffing applications can be used for passive scanning to reveal information such as operating system, known protocols running on non-standard ports and active network applications with known bugs. Passive scanning may be conducted by a network administrator scanning for security vulnerabilities or by an intruder as a preliminary to an active attack.

For an intruder, passive scanning's main advantage is that it does not leave a trail that could alert users or administrators to their activities. For an administrator, the main advantage is that it doesn't risk causing undesired behavior on the target computer, such as freezes. Because of these advantages, passive scanning need not be limited to a narrow time frame to minimize risk or disruption, which means that it is likely to return more information.

Passive scanning does have limitations. It is not as complete in detail as active vulnerability scanning and cannot detect any applications that are not currently sending out traffic; nor can it distinguish false information put out for obfuscation.

QUESTION 478

Two users must encrypt and transmit large amounts of data between them.

Which of the following should they use to encrypt and transmit the data?

- A. Symmetric algorithm
- B. Hash function
- C. Digital signature
- D. Obfuscation

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 479

A new Chief Information Officer (CIO) has been reviewing the badging and decides to write a policy that all employees must have their badges rekeyed at least annually. Which of the following controls BEST describes this policy?

- A. Physical
- B. Corrective
- C. Technical

D. Administrative

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 480

A software developer is concerned about DLL hijacking in an application being written. Which of the following is the MOST viable mitigation measure of this type of attack?

- A. The DLL of each application should be set individually
- B. All calls to different DLLs should be hard-coded in the application
- C. Access to DLLs from the Windows registry should be disabled
- D. The affected DLLs should be renamed to avoid future hijacking

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 481

An application was recently compromised after some malformed data came in via web form. Which of the following would MOST likely have prevented this?

- A. Input validation
- B. Proxy server
- C. Stress testing
- D. Encoding

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 482

While working on an incident, Joe, a technician, finished restoring the OS and applications on a workstation from the original media. Joe is about to begin copying the user's files back onto the hard drive. Which of the following incident response steps is Joe working on now?

- A. Recovery
- B. Eradication
- C. Containment
- D. Identification

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 483

A systems administrator found a suspicious file in the root of the file system. The file contains URLs, usernames, passwords, and text from other documents being edited on the system. Which of the following types of malware would generate such a file?

- A. Keylogger
- B. Rootkit
- C. Bot
- D. RAT

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 484

A computer emergency response team is called at midnight to investigate a case in which a mail server was restarted. After an initial investigation, it was discovered that email is being exfiltrated through an active connection.

Which of the following is the NEXT step the team should take?

- A. Identify the source of the active connection
- B. Perform eradication of active connection and recover
- C. Performance containment procedure by disconnecting the server
- D. Format the server and restore its initial configuration

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 485

A remote intruder wants to take inventory of a network so exploits can be researched. The intruder is looking for information about software versions on the network. Which of the following techniques is the intruder using?

- A. Banner grabbing
- B. Port scanning
- C. Packet sniffing
- D. Virus scanning

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 486

A security technician is configuring an access management system to track and record user actions. Which of the following functions should the technician configure?

- A. Accounting
- B. Authorization
- C. Authentication
- D. Identification

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 487

A security administrator installed a new network scanner that identifies new host systems on the network. Which of the following did the security administrator install?

- A. Vulnerability scanner
- B. Network-based IDS
- C. Rogue system detection
- D. Configuration compliance scanner

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 488

A Chief Information Officer (CIO) has decided it is not cost effective to implement safeguards against a known vulnerability.

Which of the following risk responses does this BEST describe?

- A. Transference
- B. Avoidance
- C. Mitigation
- D. Acceptance

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 489

A technician is investigating a potentially compromised device with the following symptoms:

Browser slowness

Frequent browser crashes

Hourglass stuck

New search toolbar
Increased memory consumption
Which of the following types of malware has infected the system?

- A. Man-in-the-browser
- B. Spoofer
- C. Spyware
- D. Adware

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 490

A penetration tester has written an application that performs a bit-by-bit XOR 0xFF operation on binaries prior to transmission over untrusted media. Which of the following BEST describes the action performed by this type of application?

- A. Hashing
- B. Key exchange
- C. Encryption
- D. Obfuscation

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 491

An audit reported has identifies a weakness that could allow unauthorized personnel access to the facility at its main entrance and from there gain access to the network. Which of the following would BEST resolve the vulnerability?

- A. Faraday cage
- B. Air gap
- C. Mantrap
- D. Bollards

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 492

When attempting to secure a mobile workstation, which of the following authentication technologies rely on the user's physical characteristics? (Select TWO)

- A. MAC address table

- B. Retina scan
- C. Fingerprint scan
- D. Two-factor authentication
- E. CAPTCHA
- F. Password string

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 493

Systems administrator and key support staff come together to simulate a hypothetical interruption of service. The team updates the disaster recovery processes and documentation after meeting. Which of the following describes the team's efforts?

- A. Business impact analysis
- B. Continuity of operation
- C. Tabletop exercise
- D. Order of restoration

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 494

A company has two wireless networks utilizing captive portals. Some employees report getting a trust error in their browsers when connecting to one of the networks.

Both captive portals are using the same server certificate for authentication, but the analyst notices the following differences between the two certificate details:

Certificate 1

Certificate Path:

Geotrust Global CA

*company.com

Certificate 2

Certificate Path:

*company.com

Which of the following would resolve the problem?

- A. Use a wildcard certificate.
- B. Use certificate chaining.
- C. Use a trust model.
- D. Use an extended validation certificate.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 495

Company A has acquired Company B. Company A has different domains spread globally, and typically migrates its acquisitions infrastructure under its own domain infrastructure. Company B, however, cannot be merged into Company A's domain infrastructure.

Which of the following methods would allow the two companies to access one another's resources?

- A. Attestation
- B. Federation
- C. Single sign-on
- D. Kerberos

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 496

A technician is configuring a load balancer for the application team to accelerate the network performance of their applications. The applications are hosted on multiple servers and must be redundant.

Given this scenario, which of the following would be the BEST method of configuring the load balancer?

- A. Round-robin
- B. Weighted
- C. Least connection
- D. Locality-based

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 497

An organization's employees currently use three different sets of credentials to access multiple internal resources. Management wants to make this process less complex. Which of the following would be the BEST option to meet this goal?

- A. Transitive trust
- B. Single sign-on
- C. Federation
- D. Secure token

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 498

An external attacker can modify the ARP cache of an internal computer. Which of the following types of attacks is described?

- A. Replay
- B. Spoofing
- C. DNS poisoning
- D. Client-side attack

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 499

A systems administrator has isolated an infected system from the network and terminated the malicious process from executing.

Which of the following should the administrator do NEXT according to the incident response process?

- A. Restore lost data from a backup.
- B. Wipe the system.
- C. Document the lessons learned.
- D. Determine the scope of impact.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 500

A new security administrator ran a vulnerability scanner for the first time and caused a system outage. Which of the following types of scans MOST likely caused the outage?

- A. Non-intrusive credentialed scan
- B. Non-intrusive non-credentialed scan
- C. Intrusive credentialed scan
- D. Intrusive non-credentialed scan

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 501

A security analyst is hardening a WiFi infrastructure.

The primary requirements are the following:

The infrastructure must allow staff to authenticate using the most secure method.

The infrastructure must allow guests to use an "open" WiFi network that logs valid email addresses before granting access to the Internet.

Given these requirements, which of the following statements BEST represents what the analyst should recommend and configure?

- A. Configure a captive portal for guests and WPS for staff.
- B. Configure a captive portal for staff and WPA for guests.
- C. Configure a captive portal for staff and WEP for guests.
- D. Configure a captive portal for guest and WPA2 Enterprise for staff

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 502

A security administrator is trying to eradicate a worm, which is spreading throughout the organization, using an old remote vulnerability in the SMB protocol. The worm uses Nmap to identify target hosts within the company. The administrator wants to implement a solution that will eradicate the current worm and any future attacks that may be using zero-day vulnerabilities.

Which of the following would BEST meet the requirements when implemented?

- A. Host-based firewall
- B. Enterprise patch management system
- C. Network-based intrusion prevention system
- D. Application blacklisting
- E. File integrity checking

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 503

Which of the following is a deployment concept that can be used to ensure only the required OS access is exposed to software applications?

- A. Staging environment
- B. Sandboxing
- C. Secure baseline
- D. Trusted OS

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 504

A procedure differs from a policy in that it:

- A. is a high-level statement regarding the company's position on a topic.
- B. sets a minimum expected baseline of behavior.
- C. provides step-by-step instructions for performing a task.
- D. describes adverse actions when violations occur.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 505

Ann, a user, reports she is unable to access an application from her desktop. A security analyst verifies Ann's access and checks the SIEM for any errors. The security analyst reviews the log file from Ann's system and notices the following output:

```
2017-08-21 10:48:12 DROPTCP 172.20.89.232 239.255.255.255 443
1900 250 ----- RECEIVE 2017-08-21 10:48:12 DROPUDP
192.168.72.205 239.255.255.255 443 1900 250 ----- RECEIVE
```

Which of the following is MOST likely preventing Ann from accessing the application from the desktop?

- A. Web application firewall
- B. DLP
- C. Host-based firewall
- D. UTM
- E. Network-based firewall

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 506

Which of the following types of penetration test will allow the tester to have access only to password hashes prior to the penetration test?

- A. Black box
- B. Gray box
- C. Credentialed
- D. White box

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 507

Which of the following threats has sufficient knowledge to cause the MOST danger to an organization?

- A. Competitors
- B. Insiders
- C. Hacktivists
- D. Script kiddies

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 508

While troubleshooting a client application connecting to the network, the security administrator notices the following error: Certificate is not valid.

Which of the following is the BEST way to check if the digital certificate is valid?

- A. PKI
- B. CRL
- C. CSR
- D. IPSec

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 509

A business sector is highly competitive, and safeguarding trade secrets and critical information is paramount. On a seasonal basis, an organization employs temporary hires and contractor personnel to accomplish its mission objectives. The temporary and contract personnel require access to network resources only when on the clock.

Which of the following account management practices are the BEST ways to manage these accounts?

- A. Employ time-of-day restrictions.
- B. Employ password complexity.
- C. Employ a random key generator strategy.
- D. Employ an account expiration strategy.
- E. Employ a password lockout policy

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 510

Which of the following locations contain the MOST volatile data?

- A. SSD
- B. Paging file
- C. RAM
- D. Cache memory

Correct Answer: D

Explanation/Reference:

QUESTION 511

Ann, a customer, is reporting that several important files are missing from her workstation. She recently received communication from an unknown party who is requesting funds to restore the files. Which of the following attacks has occurred?

- A. Ransomware
- B. Keylogger
- C. Buffer overflow
- D. Rootkit

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 512

Every morning, a systems administrator monitors failed login attempts on the company's log management server. The administrator notices the DBAdmin account has five failed username and/or password alerts during a ten-minute window. The systems administrator determines the user account is a dummy account used to attract attackers.

Which of the following techniques should the systems administrator implement?

- A. Role-based access control
- B. Honeypot
- C. Rule-based access control
- D. Password cracker

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 513

Joe, a user, has been trying to send Ann, a different user, an encrypted document via email. Ann has not received the attachment but is able to receive the header information.

Which of the following is MOST likely preventing Ann from receiving the encrypted file?

- A. Unencrypted credentials

- B. Authentication issues
- C. Weak cipher suite
- D. Permission issues

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 514

A systems administrator is configuring a system that uses data classification labels. Which of the following will the administrator need to implement to enforce access control?

- A. Discretionary access control
- B. Mandatory access control
- C. Role-based access control
- D. Rule-based access control

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 515

An analyst is using a vulnerability scanner to look for common security misconfigurations on devices. Which of the following might be identified by the scanner? (Select TWO).

- A. The firewall is disabled on workstations.
- B. SSH is enabled on servers.
- C. Browser homepages have not been customized.
- D. Default administrator credentials exist on networking hardware.
- E. The OS is only set to check for updates once a day.

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 516

A security analyst is reviewing patches on servers. One of the servers is reporting the following error message in the WSUS management console:

The computer has not reported status in 30 days.

Given this scenario, which of the following statements BEST represents the issue with the output above?

- A. The computer in question has not pulled the latest ACL policies for the firewall.
- B. The computer in question has not pulled the latest GPO policies from the management server.

- C. The computer in question has not pulled the latest antivirus definitions from the antivirus program.
- D. The computer in question has not pulled the latest application software updates.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 517

A security administrator is reviewing the following PowerShell script referenced in the Task Scheduler on a database server:

```
$members = GetADGroupMemeber -Identity "Domain Admins" -Recursive | Select - ExpandProperty  
name  
if ($members -notcontains "JohnDoe"){  
  Remove-Item -path C:\Database -recurse -force  
}
```

Which of the following did the security administrator discover?

- A. Ransomware
- B. Backdoor
- C. Logic bomb
- D. Trojan

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 518

A bank is experiencing a DoS attack against an application designed to handle 500 IP-based sessions. in addition, the perimeter router can only handle 1Gbps of traffic.

Which of the following should be implemented to prevent a DoS attacks in the future?

- A. Deploy multiple web servers and implement a load balancer
- B. Increase the capacity of the perimeter router to 10 Gbps
- C. Install a firewall at the network to prevent all attacks
- D. Use redundancy across all network devices and services

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 519

A malicious system continuously sends an extremely large number of SYN packets to a server. Which of the following BEST describes the resulting effect?

- A. The server will be unable to server clients due to lack of bandwidth
- B. The server's firewall will be unable to effectively filter traffic due to the amount of data transmitted
- C. The server will crash when trying to reassemble all the fragmented packets
- D. The server will exhaust its memory maintaining half-open connections

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 520

A systems administrator is deploying a new mission essential server into a virtual environment. Which of the following is BEST mitigated by the environment's rapid elasticity characteristic?

- A. Data confidentiality breaches
- B. VM escape attacks
- C. Lack of redundancy
- D. Denial of service

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 521

Which of the following is the proper order for logging a user into a system from the first step to the last step?

- A. Identification, authentication, authorization
- B. Identification, authorization, authentication
- C. Authentication, identification, authorization
- D. Authentication, identification, authorization
- E. Authorization, identification, authentication

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 522

A company stores highly sensitive data files used by the accounting system on a server file share. The accounting system uses a service account named accounting-svc to access the file share. The data is protected with a full disk encryption, and the permissions are set as follows:

File system permissions: Users = Read Only
Share permission: accounting-svc = Read Only

Given the listed protections are in place and unchanged, to which of the following risks is the data still subject?

- A. Exploitation of local console access and removal of data
- B. Theft of physical hard drives and a breach of confidentiality
- C. Remote exfiltration of data using domain credentials
- D. Disclosure of sensitive data to third parties due to excessive share permissions

Correct Answer: A

QUESTION 539

An organization has implemented an IPSec VPN access for remote users.

Which of the following IPSec modes would be the MOST secure for this organization to implement?

- A. Tunnel mode
- B. Transport mode
- C. AH-only mode
- D. ESP-only mode

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

In both ESP and AH cases with IPSec Transport mode, the IP header is exposed. The IP header is not exposed in IPSec Tunnel mode.

QUESTION 540

Several workstations on a network are found to be on OS versions that are vulnerable to a specific attack.

Which of the following is considered to be a corrective action to combat this vulnerability?

- A. Install an antivirus definition patch
- B. Educate the workstation users
- C. Leverage server isolation
- D. Install a vendor-supplied patch
- E. Install an intrusion detection system

Correct Answer: D

QUESTION 541

A security administrator suspects that a DDoS attack is affecting the DNS server. The administrator accesses a workstation with the hostname of workstation01 on the network and obtains the following output from the ipconfig command:

| IP Address | Subnet Mask | Default Gateway | DNS Server Address |
|--------------|---------------|-----------------|--------------------|
| 192.168.1.26 | 255.255.255.0 | 192.168.1.254 | 192.168.1.254 |

The administrator successfully pings the DNS server from the workstation. Which of the following commands should be issued from the workstation to verify the DDoS attack is no longer occurring?

- A. dig www.google.com
- B. dig 192.168.1.254
- C. dig workstation01.com
- D. dig 192.168.1.26

Correct Answer: C

QUESTION 542

A security administrator has configured a RADIUS and a TACACS+ server on the company's network. Network devices will be required to connect to the TACACS+ server for authentication and send accounting information to the RADIUS server. Given the following information:

```
RADIUS IP: 192.168.20.45
TACACS+ IP: 10.23.65.7
```

Which of the following should be configured on the network clients? (Select two.)

- A. Accounting port: TCP 389
- B. Accounting port: UDP 1812
- C. Accounting port: UDP 1813
- D. Authentication port: TCP 49
- E. Authentication port: TCP 88
- F. Authentication port: UDP 636

Correct Answer: CD
